the 1990s, the number of people in the UK who are employed in the public sector has increased by 1.5 million, from 2.5 million in 1980 to 4 million in 1995. The public sector has also become an important employer of women, with 5.5 million women employed in the public sector in 1995, compared with 4.5 million in 1980.

There are a number of reasons why the public sector has become an important employer of women. One reason is that the public sector has a high proportion of women in its workforce. In 1995, 88% of the public sector workforce were women, compared with 78% in 1980. This is due to a number of factors, including the fact that the public sector has a high proportion of jobs that are traditionally held by women, such as teaching, nursing, and social work.

Another reason why the public sector has become an important employer of women is that it has a high proportion of jobs that are part-time or flexible. In 1995, 38% of the public sector workforce were employed on part-time or flexible contracts, compared with 28% in 1980. This is due to a number of factors, including the fact that the public sector has a high proportion of jobs that are traditionally held by women, such as teaching, nursing, and social work.

A third reason why the public sector has become an important employer of women is that it has a high proportion of jobs that are well paid. In 1995, the average salary of a public sector employee was £18,000, compared with £15,000 in 1980. This is due to a number of factors, including the fact that the public sector has a high proportion of jobs that are traditionally held by women, such as teaching, nursing, and social work.

There are a number of reasons why the public sector has become an important employer of women. One reason is that the public sector has a high proportion of women in its workforce. In 1995, 38% of the public sector workforce were employed on part-time or flexible contracts, compared with 28% in 1980. This is due to a number of factors, including the fact that the public sector has a high proportion of jobs that are traditionally held by women, such as teaching, nursing, and social work.

the 1990s, the number of people in the UK who are employed in the public sector has increased by 1.5 million, from 2.5 million in 1980 to 4 million in 1998 (Department of Health 1999). The public sector has become a major employer in the UK, and the public sector workforce has grown from 10% of the total workforce in 1980 to 15% in 1998.

There is a growing awareness of the need to improve the health of the public sector workforce. The Department of Health (1999) has identified the need to improve the health of the public sector workforce as a key priority for the NHS. The Department of Health has set a target of reducing the number of public sector employees who are absent from work due to illness by 10% by the year 2000. This target is based on the assumption that the public sector workforce will be 4 million in 2000, and that the number of public sector employees who are absent from work due to illness will be 400,000 in 2000.

The Department of Health has identified a number of factors that are likely to contribute to the increase in public sector employees who are absent from work due to illness. These factors include: the increasing age of the public sector workforce, the increasing number of public sector employees who are employed in non-core jobs, and the increasing number of public sector employees who are employed in jobs that are physically demanding.

The Department of Health has identified a number of strategies that are likely to help to reduce the number of public sector employees who are absent from work due to illness. These strategies include: improving the health of the public sector workforce, improving the working conditions of the public sector workforce, and improving the management of the public sector workforce.

The Department of Health has identified a number of key areas for improvement in the health of the public sector workforce. These areas include: the physical health of the public sector workforce, the mental health of the public sector workforce, and the social health of the public sector workforce.

The Department of Health has identified a number of key areas for improvement in the working conditions of the public sector workforce. These areas include: the physical working conditions of the public sector workforce, the mental working conditions of the public sector workforce, and the social working conditions of the public sector workforce.

the 1990s, the number of people in the world who are under 15 years of age has increased from 1.1 billion to 1.5 billion. The number of people aged 65 and over has increased from 200 million to 350 million. The number of people aged 15–64 years has increased from 1.5 billion to 2.0 billion.

There are a number of factors which have contributed to the increase in the number of people in the world who are under 15 years of age. These factors include a decline in the death rate, a decline in the birth rate, and a decline in the rate of migration.

The decline in the death rate has been the most significant factor in the increase in the number of people in the world who are under 15 years of age. This decline has been due to a number of factors, including improvements in medical care, a decline in the incidence of infectious diseases, and a decline in the incidence of violence.

The decline in the birth rate has also contributed to the increase in the number of people in the world who are under 15 years of age. This decline has been due to a number of factors, including a decline in the number of children born to women, a decline in the number of children born to men, and a decline in the number of children born to couples.

The decline in the rate of migration has also contributed to the increase in the number of people in the world who are under 15 years of age. This decline has been due to a number of factors, including a decline in the number of people who are migrating from one country to another, a decline in the number of people who are migrating from one region to another, and a decline in the number of people who are migrating from one social class to another.

The increase in the number of people in the world who are under 15 years of age has a number of implications. These implications include a decline in the number of people who are in the workforce, a decline in the number of people who are paying taxes, and a decline in the number of people who are contributing to the economy.

The increase in the number of people in the world who are under 15 years of age also has a number of implications for the environment. These implications include a decline in the number of people who are using natural resources, a decline in the number of people who are polluting the environment, and a decline in the number of people who are contributing to climate change.

The increase in the number of people in the world who are under 15 years of age also has a number of implications for the future. These implications include a decline in the number of people who are living in poverty, a decline in the number of people who are living in slums, and a decline in the number of people who are living in the developing world.

The increase in the number of people in the world who are under 15 years of age also has a number of implications for the quality of life. These implications include a decline in the number of people who are healthy, a decline in the number of people who are educated, and a decline in the number of people who are employed.

The increase in the number of people in the world who are under 15 years of age also has a number of implications for the future of the world. These implications include a decline in the number of people who are living in peace, a decline in the number of people who are living in freedom, and a decline in the number of people who are living in a world that is free from violence.

The increase in the number of people in the world who are under 15 years of age also has a number of implications for the future of the world. These implications include a decline in the number of people who are living in a world that is free from poverty, a decline in the number of people who are living in a world that is free from hunger, and a decline in the number of people who are living in a world that is free from disease.

The increase in the number of people in the world who are under 15 years of age also has a number of implications for the future of the world. These implications include a decline in the number of people who are living in a world that is free from war, a decline in the number of people who are living in a world that is free from terrorism, and a decline in the number of people who are living in a world that is free from crime.

the 1990s, the incidence of *S. flexneri* has increased in the United Kingdom [10]. In the United States, *S. flexneri* has been reported as the most common serotype in children with acute bacterial dysentery [11].

There is a paucity of data on the epidemiology of *S. flexneri* in the United Kingdom. In the 1970s, *S. flexneri* was the most commonly isolated serotype from patients with acute bacterial dysentery in the United Kingdom [12]. In the 1980s, *S. flexneri* was the most commonly isolated serotype from patients with acute bacterial dysentery in the United Kingdom [13]. In the 1990s, *S. flexneri* was the most commonly isolated serotype from patients with acute bacterial dysentery in the United Kingdom [14].

The purpose of this study was to determine the prevalence of *S. flexneri* in the United Kingdom. The study was designed to determine the prevalence of *S. flexneri* in the United Kingdom.
