the 1990s, the number of people in the UK who are employed in the public sector has increased by 1.5 million, from 2.5 million in 1980 to 4 million in 1998 (Department of Health 1999).

There is a growing emphasis on the need to improve the quality of care and services provided by the public sector. This has led to a number of initiatives, including the introduction of the Health Care Act 1999, which aims to improve the quality of care and services provided by the public sector. The Act includes provisions for the establishment of a new regulatory body, the Health Care Commission, which will be responsible for monitoring and improving the quality of care and services provided by the public sector.

The Health Care Commission will be responsible for monitoring and improving the quality of care and services provided by the public sector. It will be responsible for setting standards for care and services, and for monitoring and improving the quality of care and services provided by the public sector. The Commission will also be responsible for ensuring that the public sector is providing care and services that are of the highest quality.
