the information science community. The first is the lack of a common language. The second is the lack of a common methodology. The third is the lack of a common framework.

The first two problems are relatively easy to solve. The third is more difficult. It requires a common framework that can be used to develop a common language and a common methodology.

the 1990s, the number of people in the world who are under 15 years of age has increased from 1.1 billion to 1.5 billion. The number of people aged 65 and over has increased from 200 million to 350 million. The number of people aged 15–64 years has increased from 1.5 billion to 2.2 billion.

There are a number of factors that have contributed to the increase in the number of people in the world who are under 15 years of age. One of the main factors is the increase in the number of people who are surviving into old age. This is due to a number of factors, including improvements in medical care, better nutrition, and a decline in the number of people who are dying from infectious diseases.

Another factor is the increase in the number of people who are having children. This is due to a number of factors, including a decline in the number of people who are having children at a young age, and a decline in the number of people who are having children at all. This is due to a number of factors, including a decline in the number of people who are having children at a young age, and a decline in the number of people who are having children at all.

The increase in the number of people in the world who are under 15 years of age is a major challenge for the world. It is a challenge because it means that there are more people who need to be educated, and more people who need to be employed. It is a challenge because it means that there are more people who need to be supported by the state, and more people who need to be supported by the family.

the 1990s, the number of people in the UK who are aged 65 and over has increased by 1.5 million (1990–1999) and is projected to increase by a further 1.5 million by 2010 (Office of National Statistics 2000). The number of people aged 65 and over is projected to increase by 2.5 million by 2020 (Office of National Statistics 2000).

There is a growing awareness of the need to develop strategies to meet the needs of the ageing population. The Department of Health (1999) has published a strategy for the ageing population, which sets out the government's commitment to improve the health and well-being of older people. The strategy is based on the following principles: (1) to improve the health and well-being of older people; (2) to ensure that older people are able to live independently; (3) to ensure that older people are able to participate in society; and (4) to ensure that older people are able to live in their own homes.

The strategy is based on the following principles: (1) to improve the health and well-being of older people; (2) to ensure that older people are able to live independently; (3) to ensure that older people are able to participate in society; and (4) to ensure that older people are able to live in their own homes. The strategy is based on the following principles: (1) to improve the health and well-being of older people; (2) to ensure that older people are able to live independently; (3) to ensure that older people are able to participate in society; and (4) to ensure that older people are able to live in their own homes.

the 1990s, the number of people in the world who are under 15 years of age has increased from 1.1 billion to 1.5 billion. The number of people aged 65 and over has increased from 150 million to 250 million. The number of people aged 15–64 years has increased from 1.5 billion to 2.0 billion.

There are a number of factors which have contributed to the increase in the number of people in the world who are under 15 years of age. These include a decline in the death rate, a decline in the birth rate, and a decline in the rate of migration.

The decline in the death rate has been the most significant factor. This has been due to a number of factors, including improvements in medical care, a decline in the incidence of infectious diseases, and a decline in the incidence of non-communicable diseases.

The decline in the birth rate has also been a significant factor. This has been due to a number of factors, including a decline in the number of children born to women, a decline in the number of children born to men, and a decline in the number of children born to couples.

The decline in the rate of migration has also been a significant factor. This has been due to a number of factors, including a decline in the number of people who are migrating from one country to another, a decline in the number of people who are migrating from one region to another, and a decline in the number of people who are migrating from one social class to another.

the 1990s, the number of people in the United States who are obese has increased by 100% (Flegal et al. 2002). In the United Kingdom, the prevalence of obesity has increased from 10% in 1980 to 16% in 1997 (Health Survey for England 1997). In the United States, the prevalence of obesity has increased from 15% in 1980 to 23% in 1994 (Flegal et al. 2002).

Obesity is a risk factor for a number of chronic diseases, including coronary heart disease, stroke, type 2 diabetes, and certain types of cancer (World Health Organization 1997). In the United States, obesity is the leading risk factor for death and disability (Flegal et al. 2002). In the United Kingdom, obesity is the leading risk factor for death and disability (Health Survey for England 1997). In the United States, obesity is the leading risk factor for death and disability (Flegal et al. 2002).

Obesity is a complex condition that is caused by a combination of genetic, environmental, and behavioral factors. In the United States, the prevalence of obesity has increased from 15% in 1980 to 23% in 1994 (Flegal et al. 2002). In the United Kingdom, the prevalence of obesity has increased from 10% in 1980 to 16% in 1997 (Health Survey for England 1997).

The text appears to be a single paragraph or a series of lines of prose, but the specific words and sentences cannot be transcribed accurately.]

the 1990s, the number of people in the world who are under 15 years of age has increased from 1.1 billion to 1.5 billion, and the number of people aged 65 and over has increased from 0.2 billion to 0.4 billion (United Nations 1999).

There are a number of reasons why the world population is ageing. First, the number of people who are aged 65 and over has increased because of the increase in life expectancy. Second, the number of people who are aged 65 and over has increased because of the increase in the number of people who are aged 65 and over. Third, the number of people who are aged 65 and over has increased because of the increase in the number of people who are aged 65 and over.

The increase in the number of people who are aged 65 and over has a number of implications for the world. First, it means that there are more people who are aged 65 and over who are dependent on others for their care. Second, it means that there are more people who are aged 65 and over who are in need of financial support.

There are a number of ways in which the world can deal with the increase in the number of people who are aged 65 and over. First, it can increase the number of people who are aged 65 and over who are in need of financial support. Second, it can increase the number of people who are aged 65 and over who are dependent on others for their care.

There are a number of ways in which the world can deal with the increase in the number of people who are aged 65 and over. First, it can increase the number of people who are aged 65 and over who are in need of financial support.
