[The following text is a dense, continuous block of characters and symbols, likely representing a corrupted or heavily redacted document. It contains no legible words or phrases.]

[The following text is a dense, continuous block of text, likely a scan of a document page. It is mostly illegible due to extreme blurring and low contrast. The text appears to be a single paragraph or a series of closely related sentences, but the specific words and structure cannot be discerned.]

[The following text is a dense, continuous block of text, likely a scan of a document page. It appears to be a mix of English and possibly some non-English characters, but the overall structure suggests a single paragraph or a series of lines of text. Due to the low resolution and potential noise in the scan, the specific words and punctuation are difficult to discern accurately. The text is oriented vertically on the page.]

---

the 1990s, the incidence of *S. flexneri* has increased in the United Kingdom [10]. In the United States, *S. flexneri* has been reported as the most common serotype in children with acute bacterial dysentery [11].

There is a paucity of data on the epidemiology of *S. flexneri* in the United Kingdom. In the 1970s, *S. flexneri* was the most commonly isolated serotype from patients with acute bacterial dysentery in the United Kingdom [12]. In the 1980s, *S. flexneri* was the most commonly isolated serotype from patients with acute bacterial dysentery in the United Kingdom [13].

In the 1990s, *S. flexneri* was the most commonly isolated serotype from patients with acute bacterial dysentery in the United Kingdom [14]. In the 1990s, *S. flexneri* was the most commonly isolated serotype from patients with acute bacterial dysentery in the United Kingdom [15].

In the 1990s, *S. flexneri* was the most commonly isolated serotype from patients with acute bacterial dysentery in the United Kingdom [16]. In the 1990s, *S. flexneri* was the most commonly isolated serotype from patients with acute bacterial dysentery in the United Kingdom [17].

In the 1990s, *S. flexneri* was the most commonly isolated serotype from patients with acute bacterial dysentery in the United Kingdom [18]. In the 1990s, *S. flexneri* was the most commonly isolated serotype from patients with acute bacterial dysentery in the United Kingdom [19].

In the 1990s, *S. flexneri* was the most commonly isolated serotype from patients with acute bacterial dysentery in the United Kingdom [20]. In the 1990s, *S. flexneri* was the most commonly isolated serotype from patients with acute bacterial dysentery in the United Kingdom [21].

In the 1990s, *S. flexneri* was the most commonly isolated serotype from patients with acute bacterial dysentery in the United Kingdom [22]. In the 1990s, *S. flexneri* was the most commonly isolated serotype from patients with acute bacterial dysentery in the United Kingdom [23].

In the 1990s, *S. flexneri* was the most commonly isolated serotype from patients with acute bacterial dysentery in the United Kingdom [24]. In the 1990s, *S. flexneri* was the most commonly isolated serotype from patients with acute bacterial dysentery in the United Kingdom [25].

In the 1990s, *S. flexneri* was the most commonly isolated serotype from patients with acute bacterial dysentery in the United Kingdom [26]. In the 1990s, *S. flexneri* was the most commonly isolated serotype from patients with acute bacterial dysentery in the United Kingdom [27].

the 1990s, the number of people in the UK who are aged 65 and over has increased by 1.5 million (1990–2000) and is projected to increase by a further 1.5 million by 2020 (Office for National Statistics 2001). The number of people aged 65 and over is projected to increase by 2.5 million by 2020 in the USA (U.S. Census Bureau 2000).

There is a growing awareness of the need to develop strategies to meet the needs of the ageing population. The ageing population is a heterogeneous group, with a wide range of needs and abilities. The needs of the ageing population are not homogeneous, and the needs of one group of older people may be very different from the needs of another group. The needs of the ageing population are not static, and the needs of one group of older people may change over time. The needs of the ageing population are not universal, and the needs of one group of older people may be different from the needs of another group.

the 1990s, the number of people in the world who are under 15 years of age has increased from 1.1 billion to 1.5 billion. The number of people aged 65 and over has increased from 200 million to 350 million. The number of people aged 15–64 years has increased from 1.5 billion to 2.0 billion.

There are a number of factors that have contributed to the increase in the number of people in the world who are under 15 years of age. One of the main factors is the increase in the number of people who are surviving into old age. This is due to a number of factors, including improvements in medical care, better nutrition, and a decline in the number of people who are dying from infectious diseases.

Another factor is the increase in the number of people who are having children. This is due to a number of factors, including a decline in the number of people who are dying from infectious diseases, a decline in the number of people who are having abortions, and a decline in the number of people who are using contraception.

The increase in the number of people in the world who are under 15 years of age has a number of implications. One of the main implications is that it will increase the demand for resources, such as food, water, and shelter. This will put pressure on the environment and on the world's resources.

Another implication is that it will increase the demand for education. This will put pressure on the world's education system and on the world's resources. It will also put pressure on the world's economy, as it will increase the number of people who are dependent on others for support.

The increase in the number of people in the world who are under 15 years of age is a major challenge for the world. It is a challenge that will require a number of solutions, including improvements in medical care, better nutrition, and a decline in the number of people who are dying from infectious diseases.

It is also a challenge that will require a number of solutions, including a decline in the number of people who are having abortions, a decline in the number of people who are using contraception, and a decline in the number of people who are dying from infectious diseases.

The increase in the number of people in the world who are under 15 years of age is a major challenge for the world. the 1990s, the number of people in the UK who are aged 65 and over has increased by 1.5 million, and the number of people aged 75 and over has increased by 1 million (Office of National Statistics 2000). The number of people aged 65 and over is projected to increase to 6.5 million by 2020, and the number of people aged 75 and over to 3.5 million (Office of National Statistics 2000).

There is a growing awareness of the need to address the health and social care needs of older people. The Department of Health (2000) has set out a strategy for the NHS to meet the needs of older people. The strategy is based on three main principles: (1) to ensure that older people have access to the services they need; (2) to ensure that older people are treated with respect and dignity; and (3) to ensure that older people are able to live independently and actively.

The strategy is based on three main principles: (1) to ensure that older people have access to the services they need; (2) to ensure that older people are treated with respect and dignity; and (3) to ensure that older people are able to live independently and actively. [The following text is a dense, continuous block of text, likely a scan of a document page. It is mostly illegible due to extreme blurring and low contrast. The text appears to be a single paragraph or a series of lines of prose, but the specific words and sentences cannot be transcribed accurately.]

[The following text is a dense, continuous block of characters and symbols, likely representing a corrupted or heavily redacted document. It contains no legible words or phrases.]
