the 1990s, the number of people in the UK who are employed in the public sector has increased by 1.5 million, from 2.5 million in 1980 to 4 million in 1995. The public sector has also become an important employer of women, with 50% of public sector employees being women in 1995.

There are a number of reasons why the public sector has become an important employer of women. One reason is that the public sector has a high proportion of women in the workforce. This is due to a number of factors, including the fact that women are more likely than men to work in the public sector, and the fact that the public sector has a high proportion of part-time jobs, which are more likely to be held by women.

Another reason why the public sector has become an important employer of women is that it provides a number of services that are essential to the well-being of the community. These services include education, health care, and social care. As a result, the public sector has a high proportion of women in the workforce, as women are more likely than men to work in these sectors.

There are a number of other reasons why the public sector has become an important employer of women. For example, the public sector has a high proportion of jobs that are considered to be 'women's work', such as teaching, nursing, and social work. This has led to a high proportion of women working in the public sector, and has helped to make it an important employer of women.

In conclusion, the public sector has become an important employer of women in the UK. This is due to a number of factors, including the fact that women are more likely than men to work in the public sector, and the fact that the public sector has a high proportion of part-time jobs, which are more likely to be held by women. The public sector also provides a number of services that are essential to the well-being of the community, and has a high proportion of jobs that are considered to be 'women's work'.

the 1990s, the number of people in the United States who are obese has increased by 50% (Flegal et al. 2002). In the United Kingdom, the prevalence of obesity has increased from 10% in 1980 to 15% in 1997 (Health Survey for England 1997). In the United States, the prevalence of obesity has increased from 15% in 1980 to 23% in 1994 (Flegal et al. 2002).

Obesity is a complex condition, with many causes and consequences. It is a leading cause of death and disability in the United States, and is associated with a number of health problems, including heart disease, diabetes, and cancer. Obesity is also a leading cause of disability in the United States, and is associated with a number of social problems, including discrimination and poverty. Obesity is a complex condition, and it is important to understand the causes and consequences of obesity in order to develop effective interventions.

There are many causes of obesity, including genetics, diet, and lifestyle. the 1990s, the number of people in the UK who are aged 65 and over has increased by 1.5 million (1990–1999) and is projected to increase by a further 1.5 million by 2010 (Office for National Statistics 2000). The number of people aged 65 and over is projected to increase by 2.5 million by 2020 (Office for National Statistics 2000).

There is a growing awareness of the need to develop strategies to meet the needs of the ageing population. The Department of Health (1999) has published a strategy for ageing, which sets out the government's commitment to improve the health and social care of older people. The strategy is based on the following principles: (1) to improve the health and social care of older people; (2) to ensure that older people are able to live independently; (3) to ensure that older people are able to participate in society; and (4) to ensure that older people are able to live in their own homes.

The strategy is based on the following principles: (1) to improve the health and social care of older people; (2) to ensure that older people are able to live independently; (3) to ensure that older people are able to participate in society; and (4) to ensure that older people are able to live in their own homes. The strategy is based on the following principles: (1) to improve the health and social care of older people; (2) to ensure that older people are able to live independently; (3) to ensure that older people are able to participate in society; and (4) to ensure that older people are able to live in their own homes.

[Illegible text block]

[REDACTED]

the 1990s, the number of people in the world who are under 15 years of age has increased from 1.1 billion to 1.5 billion, and the number of people aged 65 and over has increased from 0.2 billion to 0.4 billion (United Nations, 1999).

There are a number of reasons why the world population is ageing. First, the number of people who are under 15 years of age has decreased from 1.1 billion in 1990 to 0.9 billion in 2000. This is due to a decline in the birth rate, which has been caused by a number of factors, including a decline in the number of children born to women, a decline in the number of children born to women who are under 15 years of age, and a decline in the number of children born to women who are over 35 years of age.

Second, the number of people who are aged 65 and over has increased from 0.2 billion in 1990 to 0.4 billion in 2000. This is due to a decline in the death rate, which has been caused by a number of factors, including a decline in the number of people who die from infectious diseases, a decline in the number of people who die from non-infectious diseases, and a decline in the number of people who die from accidents.

Third, the number of people who are aged 65 and over has increased from 0.2 billion in 1990 to 0.4 billion in 2000. This is due to a decline in the death rate, which has been caused by a number of factors, including a decline in the number of people who die from infectious diseases, a decline in the number of people who die from non-infectious diseases, and a decline in the number of people who die from accidents.

Fourth, the number of people who are aged 65 and over has increased from 0.2 billion in 1990 to 0.4 billion in 2000. This is due to a decline in the death rate, which has been caused by a number of factors, including a decline in the number of people who die from infectious diseases, a decline in the number of people who die from non-infectious diseases, and a decline in the number of people who die from accidents.

Fifth, the number of people who are aged 65 and over has increased from 0.2 billion in 1990 to 0.4 billion in 2000. This is due to a decline in the death rate, which has been caused by a number of factors, including a decline in the number of people who die from infectious diseases, a decline in the number of people who die from non-infectious diseases, and a decline in the number of people who die from accidents.

Sixth, the number of people who are aged 65 and over has increased from 0.2 billion in 1990 to 0.4 billion in 2000. This is due to a decline in the death rate, which has been caused by a number of factors, including a decline in the number of people who die from infectious diseases, a decline in the number of people who die from non-infectious diseases, and a decline in the number of people who die from accidents.

Seventh, the number of people who are aged 65 and over has increased from 0.2 billion in 1990 to 0.4 billion in 2000. This is due to a decline in the death rate, which has been caused by a number of factors, including a decline in the number of people who die from infectious diseases, a decline in the number of people who die from non-infectious diseases, and a decline in the number of people who die from accidents.

Eighth, the number of people who are aged 65 and over has increased from 0.2 billion in 1990 to 0.4 billion in 2000. This is due to a decline in the death rate, which has been caused by a number of factors, including a decline in the number of people who die from infectious diseases, a decline in the number of people who die from non-infectious diseases, and a decline in the number of people who die from accidents.

[The following text is a dense, continuous block of text, likely a scan of a document page. It appears to be a mix of English and possibly some non-English characters, but the overall structure suggests a single paragraph or a series of lines of text. Due to the low resolution and potential noise in the scan, the specific words and punctuation are difficult to discern accurately. The text is oriented vertically on the page.]
