[The following text is a dense, continuous block of text, likely a scan of a document page. It appears to be a mix of English and possibly some non-English characters, but the overall structure suggests a single paragraph or a series of lines of text. Due to the low resolution and potential noise in the scan, the specific words and punctuation are difficult to discern accurately. The text is oriented vertically on the page.]

the 1990s, the number of people in the world who are under 15 years of age has increased from 1.1 billion to 1.5 billion. The number of people aged 65 and over has increased from 200 million to 350 million. The number of people aged 15–64 years has increased from 1.5 billion to 2.1 billion.

There are a number of factors which have contributed to the increase in the number of people in the world who are under 15 years of age. These include a decline in the death rate, a decline in the birth rate, and a decline in the rate of migration.

The decline in the death rate has been the most significant factor. This has been due to a number of factors, including a decline in the incidence of infectious diseases, a decline in the incidence of non-communicable diseases, and a decline in the incidence of violence.

The decline in the birth rate has also been a significant factor. This has been due to a number of factors, including a decline in the number of children born to women, a decline in the number of children born to men, and a decline in the number of children born to couples.

The decline in the rate of migration has also been a significant factor. This has been due to a number of factors, including a decline in the number of people who are migrating from one country to another, a decline in the number of people who are migrating from one region to another, and a decline in the number of people who are migrating from one social class to another.

The increase in the number of people in the world who are aged 65 and over has also been a significant factor. This has been due to a number of factors, including a decline in the death rate, a decline in the birth rate, and a decline in the rate of migration.

The increase in the number of people in the world who are aged 15–64 years has also been a significant factor. This has been due to a number of factors, including a decline in the death rate, a decline in the birth rate, and a decline in the rate of migration.

[The following text is a dense, continuous block of text, likely a scan of a document page. It is mostly illegible due to extreme blurring and low contrast. The text appears to be a single paragraph or a section of a larger document, but the specific words and sentences cannot be transcribed accurately.]

the 1990s, the number of people in the UK who are aged 65 and over has increased by 1.5 million, and the number of people aged 75 and over has increased by 1.1 million (Office of National Statistics 1999). The number of people aged 85 and over has increased by 0.5 million in the same period.

There is a growing awareness of the need to develop services to meet the needs of the ageing population. The Department of Health (1999) has published a strategy for ageing, which sets out the government's commitment to improve the lives of older people. The strategy is based on three main principles: to promote independence, to support families and carers, and to improve the quality of life of older people.

The strategy also sets out a number of key objectives, including: to reduce the number of people who are dependent on others; to increase the number of people who are able to live independently; to improve the quality of life of older people; and to ensure that older people are able to participate fully in society.

The strategy is a key document for the development of services for older people. It provides a framework for the development of services, and sets out the government's commitment to improve the lives of older people. The strategy is a key document for the development of services for older people.
