[The following text is a dense, continuous block of characters and symbols, likely representing a corrupted or redacted document. It contains no legible words or phrases.]

the 1990s, the number of people in the UK who are aged 65 and over has increased by 1.5 million, and the number of people aged 75 and over has increased by 1.1 million (Office for National Statistics 1999). The number of people aged 65 and over is projected to increase to 6.5 million by 2011, and the number of people aged 75 and over to 4.5 million (Office for National Statistics 1999).

There is a growing awareness of the need to develop services to meet the needs of older people, and a number of initiatives have been developed to address this need. The Department of Health (1999) has published a strategy for older people, which sets out the government's commitment to improve the lives of older people. The strategy is based on three main principles: (1) to ensure that older people have the opportunity to live independently and actively; (2) to ensure that older people have access to the services and support they need; and (3) to ensure that older people are treated with respect and dignity.

The strategy is based on three main principles: (1) to ensure that older people have the opportunity to live independently and actively; (2) to ensure that older people have access to the services and support they need; and (3) to ensure that older people are treated with respect and dignity. The strategy is based on three main principles: (1) to ensure that older people have the opportunity to live independently and actively; (2) to ensure that older people have access to the services and support they need; and (3) to ensure that older people are treated with respect and dignity.

The strategy is based on three main principles: (1) to ensure that older people have the opportunity to live independently and actively; (2) to ensure that older people have access to the services and support they need; and (3) to ensure that older people are treated with respect and dignity. [The following text is a dense, continuous block of text, likely a scan of a document page. It is mostly illegible due to extreme blurring and low contrast. The text appears to be a single paragraph or a series of lines of prose, but the specific words and sentences cannot be transcribed accurately.]

[The following text is a dense, continuous block of text, likely a scan of a document page. It is mostly illegible due to extreme blurring and low contrast. The text appears to be a single paragraph or a series of closely related sentences, but the specific words and structure cannot be discerned.]

[The following text is a dense, continuous block of text, likely a scan of a document page. It appears to be a mix of English and possibly some non-English characters, but the overall structure suggests a formal document or report. The text is too blurry and low-contrast to transcribe accurately. It seems to contain several paragraphs of text, possibly including a title or header at the top and a footer at the bottom. The content is illegible due to the quality of the scan.]

the 1990s, the incidence of *S. flexneri* has increased in the United Kingdom [10]. In the United States, *S. flexneri* has been reported as the most common serotype in children with acute bacterial dysentery [11]. In the United Kingdom, *S. flexneri* has been reported as the most common serotype in children with acute bacterial dysentery [12].

There is a need to develop a vaccine against *S. flexneri* to protect children in the United Kingdom and other countries where the incidence of *S. flexneri* is high. The purpose of this study was to determine the serotypes of *S. flexneri* isolated from children with acute bacterial dysentery in the United Kingdom, and to determine the serotypes of *S. flexneri* isolated from children with acute bacterial dysentery in the United States.

the 1990s, the number of people in the UK who are employed in the public sector has increased by 1.5 million, from 2.5 million in 1980 to 4 million in 1999. The public sector has also become an important employer of people with disabilities, with 1.5 million people with disabilities employed in the public sector in 1999, compared with 1.2 million in 1980.

There are a number of reasons why the public sector has become an important employer of people with disabilities. One reason is that the public sector has a long history of employing people with disabilities. In the 19th century, the public sector employed people with disabilities in a number of different roles, including as clerks, typists, and stenographers.

Another reason why the public sector has become an important employer of people with disabilities is that it has a number of advantages over the private sector. For example, the public sector is often able to offer people with disabilities a more flexible working arrangement, such as part-time work or work from home.

There are also a number of other reasons why the public sector has become an important employer of people with disabilities. For example, the public sector is often able to offer people with disabilities a more secure job, as it is often a permanent position. This is in contrast to the private sector, where people with disabilities are often employed on a temporary basis.

There are also a number of other reasons why the public sector has become an important employer of people with disabilities. For example, the public sector is often able to offer people with disabilities a more comprehensive benefits package, including a pension and sick leave. This is in contrast to the private sector, where people with disabilities are often not offered a benefits package.

There are also a number of other reasons why the public sector has become an important employer of people with disabilities. For example, the public sector is often able to offer people with disabilities a more supportive work environment, with a number of different support services available. This is in contrast to the private sector, where people with disabilities are often not offered a supportive work environment.

There are also a number of other reasons why the public sector has become an important employer of people with disabilities. For example, the public sector is often able to offer people with disabilities a more inclusive work environment, with a number of different measures in place to ensure that people with disabilities are able to participate fully in the work environment. This is in contrast to the private sector, where people with disabilities are often not offered an inclusive work environment.

There are also a number of other reasons why the public sector has become an important employer of people with disabilities. For example, the public sector is often able to offer people with disabilities a more accessible work environment, with a number of different measures in place to ensure that people with disabilities are able to access the work environment. This is in contrast to the private sector, where people with disabilities are often not offered an accessible work environment.

There are also a number of other reasons why the public sector has become an important employer of people with disabilities. For example, the public sector is often able to offer people with disabilities a more equitable work environment, with a number of different measures in place to ensure that people with disabilities are able to participate fully in the work environment. This is in contrast to the private sector, where people with disabilities are often not offered an equitable work environment.

There are also a number of other reasons why the public sector has become an important employer of people with disabilities. For example, the public sector is often able to offer people with disabilities a more diverse work environment, with a number of different measures in place to ensure that people with disabilities are able to participate fully in the work environment. This is in contrast to the private sector, where people with disabilities are often not offered a diverse work environment.

There are also a number of other reasons why the public sector has become an important employer of people with disabilities. For example, the public sector is often able to offer people with disabilities a more professional work environment, with a number of different measures in place to ensure that people with disabilities are able to participate fully in the work environment. This is in contrast to the private sector, where people with disabilities are often not offered a professional work environment.

There are also a number of other reasons why the public sector has become an important employer of people with disabilities. For example, the public sector is often able to offer people with disabilities a more structured work environment, with a number of different measures in place to ensure that people with disabilities are able to participate fully in the work environment. This is in contrast to the private sector, where people with disabilities are often not offered a structured work environment.

[The following text is a dense, continuous block of text, likely a scan of a document page. the 1990s, the incidence of *S. flexneri* has increased in the United Kingdom [10]. In the United States, *S. flexneri* has been reported as the most common serotype in children with acute bacterial dysentery [11].

There is a paucity of data on the epidemiology of *S. flexneri* in the United Kingdom. In the 1980s, *S. flexneri* was the most commonly isolated serotype from patients with acute bacterial dysentery in the United Kingdom [12]. In the 1990s, *S. flexneri* was the most commonly isolated serotype from patients with acute bacterial dysentery in the United Kingdom [13].

The purpose of this study was to determine the prevalence of *S. flexneri* in the United Kingdom. The study was designed to determine the prevalence of *S. flexneri* in the United Kingdom. The study was designed to determine the prevalence of *S. flexneri* in the United Kingdom.
