the 1990s, the incidence of *S. flexneri* serotype 3 infections has increased in the United Kingdom [10]. In the United States, the incidence of *S. flexneri* serotype 3 infections has increased in the 1990s, but the incidence of *S. flexneri* serotype 4 infections has decreased [11].

There is a paucity of data on the incidence of *S. flexneri* infections in the United Kingdom. In the 1980s, *S. flexneri* serotype 3 was the most commonly isolated serotype from patients with acute colitis in the United Kingdom [12]. In the 1990s, *S. flexneri* serotype 3 was the most commonly isolated serotype from patients with acute colitis in the United Kingdom [13].

The purpose of this study was to determine the incidence of *S. flexneri* infections in the United Kingdom in the 1990s. We determined the incidence of *S. flexneri* infections in the United Kingdom in the 1990s by analysing data from the National Enteric Infection Reference Unit (NEIRU) in the United Kingdom. The NEIRU is a national reference unit for the diagnosis of enteric infections in the United Kingdom.

We determined the incidence of *S. flexneri* infections in the United Kingdom in the 1990s by analysing data from the NEIRU in the United Kingdom. the 1990s, the number of people in the UK who are aged 65 and over has increased by 1.5 million (1990–2000) and is projected to increase by a further 1.5 million by 2020 (Office for National Statistics 2001). The number of people aged 65 and over is projected to increase by 2.5 million by 2020 in the USA (U.S. Census Bureau 2000).

There is a growing awareness of the need to develop strategies to meet the needs of older people. The World Health Organization (WHO) has developed a 'Global Strategy on Ageing and Health' (WHO 1999) which aims to 'enable older people to live lives of fulfilment and to contribute to the well-being of their families, communities and societies' (WHO 1999, p. 1). The WHO strategy is based on the following principles:

- Older people should be able to live lives of fulfilment and to contribute to the well-being of their families, communities and societies.
- Older people should be able to live in their own homes and communities.
- Older people should be able to participate in social, cultural, economic and political life.
- Older people should be able to live in a safe and secure environment.

The WHO strategy is based on the following principles: older people should be able to live lives of fulfilment and to contribute to the well-being of their families, communities and societies.

The WHO strategy is based on the following principles: older people should be able to live in their own homes and communities.

the 1990s, the number of people in the world who are under 15 years of age has increased from 1.1 billion to 1.5 billion. The number of people aged 65 and over has increased from 200 million to 350 million. The number of people aged 15–64 years has increased from 1.5 billion to 2.0 billion.

There are a number of factors which have contributed to the increase in the number of people in the world who are under 15 years of age. One of the main factors is the increase in the number of people who are having children at a younger age. This is due to a number of factors, including the fact that people are having children at a younger age than in the past, and the fact that people are having more children than in the past.

Another factor is the increase in the number of people who are surviving into old age. This is due to a number of factors, including the fact that people are living longer than in the past, and the fact that people are having more children than in the past. This is due to a number of factors, including the fact that people are having children at a younger age than in the past, and the fact that people are having more children than in the past.

The increase in the number of people in the world who are under 15 years of age is a major challenge for the world. It is a challenge because it means that there are more people who need to be educated, and more people who need to be employed. It is a challenge because it means that there are more people who need to be supported by the state, and more people who need to be supported by the family.

The increase in the number of people in the world who are under 15 years of age is a major challenge for the world. the 1990s, the number of people in the UK who are employed in the public sector has increased by 1.5 million, from 2.5 million in 1980 to 4 million in 1998. The public sector has also become an important employer of women, with 5.5 million women employed in the public sector in 1998, compared with 4.5 million in 1980.

There are a number of reasons why the public sector has become an important employer of women. One reason is that the public sector has a high proportion of women in its workforce. In 1998, 88% of the public sector workforce were women, compared with 78% in 1980. This is due to a number of factors, including the fact that the public sector has a high proportion of jobs that are traditionally held by women, such as teaching, nursing, and social work.

Another reason why the public sector has become an important employer of women is that it has a high proportion of jobs that are part-time or flexible. In 1998, 28% of the public sector workforce were employed on part-time or flexible contracts, compared with 18% in 1980. This is due to a number of factors, including the fact that the public sector has a high proportion of jobs that are traditionally held by women, such as teaching, nursing, and social work.

A third reason why the public sector has become an important employer of women is that it has a high proportion of jobs that are well paid. In 1998, the average salary of a public sector employee was £18,000, compared with £15,000 in 1980. This is due to a number of factors, including the fact that the public sector has a high proportion of jobs that are traditionally held by women, such as teaching, nursing, and social work.

There are a number of other reasons why the public sector has become an important employer of women. One reason is that the public sector has a high proportion of jobs that are secure. In 1998, 88% of the public sector workforce were employed on permanent contracts, compared with 78% in 1980. This is due to a number of factors, including the fact that the public sector has a high proportion of jobs that are traditionally held by women, such as teaching, nursing, and social work.

Another reason why the public sector has become an important employer of women is that it has a high proportion of jobs that are well located. In 1998, 28% of the public sector workforce were employed in London, compared with 18% in 1980. This is due to a number of factors, including the fact that the public sector has a high proportion of jobs that are traditionally held by women, such as teaching, nursing, and social work.

A third reason why the public sector has become an important employer of women is that it has a high proportion of jobs that are well matched to women's skills. In 1998, 88% of the public sector workforce were employed in jobs that required a degree or higher qualification, compared with 78% in 1980. This is due to a number of factors, including the fact that the public sector has a high proportion of jobs that are traditionally held by women, such as teaching, nursing, and social work.

There are a number of other reasons why the public sector has become an important employer of women. One reason is that the public sector has a high proportion of jobs that are well paid. In 1998, the average salary of a public sector employee was £18,000, compared with £15,000 in 1980.
