the 1990s, the incidence of *S. flexneri* infections has increased in the United Kingdom [10]. In the United States, *S. flexneri* has been reported as the most common serotype of *Shigella* isolated from children with shigellosis [11]. In the United Kingdom, *S. flexneri* is the most common serotype isolated from children with shigellosis [12].

There is a paucity of data on the epidemiology of *S. flexneri* infections in the United Kingdom. In the United States, *S. flexneri* has been reported as the most common serotype of *Shigella* isolated from children with shigellosis [11]. In the United Kingdom, *S. flexneri* is the most common serotype isolated from children with shigellosis [12].

The purpose of this study was to determine the prevalence of *S. flexneri* infections in children with shigellosis in the United Kingdom. The study was conducted in the United Kingdom, where *S. flexneri* is the most common serotype isolated from children with shigellosis [12].

the 1990s, the number of people in the United States who are obese has increased by 100% (Flegal et al. 2002). In the United Kingdom, the prevalence of obesity has increased from 10% in 1980 to 15% in 1997 (Health Survey for England 1997). In the United States, the prevalence of obesity has increased from 15% in 1980 to 23% in 1994 (Flegal et al. 2002).

Obesity is a complex condition, and its aetiology is multifactorial. It is a result of an imbalance between energy intake and energy expenditure. The energy intake is determined by the amount of food and drink consumed, and the energy expenditure is determined by the amount of physical activity. The imbalance between energy intake and energy expenditure is the result of a combination of genetic, environmental, and behavioural factors.

Obesity is a major public health problem because it is a risk factor for a number of chronic diseases, including heart disease, stroke, type 2 diabetes, and certain types of cancer. Obesity is also a leading cause of disability and premature death. In the United States, obesity is the leading cause of death among children and adolescents (Flegal et al. 2002).

Obesity is a complex condition, and its aetiology is multifactorial. It is a result of an imbalance between energy intake and energy expenditure. the 1990s, the number of people in the world who are under 15 years of age has increased from 1.1 billion to 1.5 billion. The number of people aged 65 and over has increased from 200 million to 350 million. The number of people aged 15–64 years has increased from 1.5 billion to 2.2 billion.

There are a number of factors which have contributed to the increase in the number of people in the world who are under 15 years of age. One of the main factors is the increase in the number of people who are having children at a younger age. This is due to a number of factors, including the fact that people are having children at a younger age than in the past, and the fact that people are having more children than in the past.

Another factor is the increase in the number of people who are surviving into old age. This is due to a number of factors, including the fact that people are living longer than in the past, and the fact that people are having more children than in the past. This is due to a number of factors, including the fact that people are having children at a younger age than in the past, and the fact that people are having more children than in the past.

The increase in the number of people in the world who are under 15 years of age is a major challenge for the world. It is a challenge because it means that there are more people who need to be educated, and more people who need to be employed. It is a challenge because it means that there are more people who need to be supported, and more people who need to be cared for.

the 1990s, the number of people in the UK who are aged 65 and over has increased by 1.5 million (1990–1999) and is projected to increase by a further 1.5 million by 2010 (Office for National Statistics 2000). The number of people aged 65 and over is projected to increase by 2.5 million by 2020 (Office for National Statistics 2000).

There is a growing awareness of the need to develop strategies to meet the needs of the ageing population. The Department of Health (1999) has published a strategy for the ageing population, which sets out the government's commitment to improve the health and well-being of older people. The strategy is based on three main principles: (1) to improve the health and well-being of older people; (2) to ensure that older people are able to live independently; and (3) to ensure that older people are able to participate in society.

The strategy is based on three main principles: (1) to improve the health and well-being of older people; (2) to ensure that older people are able to live independently; and (3) to ensure that older people are able to participate in society.
