the 1990s, the number of people in the UK who are aged 65 and over has increased from 10.5 million to 12.5 million, and the number of people aged 75 and over has increased from 4.5 million to 6.5 million (Office for National Statistics 2000).

There is a growing awareness of the need to address the needs of older people in the community. The Department of Health (1999) has published a strategy for older people, which sets out a vision for the future of older people's health and care. The strategy is based on the following principles: older people should be able to live independently and actively; older people should be able to access the services they need; and older people should be able to participate in decisions about their care and services.

The strategy also sets out a number of key objectives for the future of older people's health and care. These include: to improve the health and well-being of older people; to ensure that older people have access to the services they need; to ensure that older people are able to participate in decisions about their care and services; and to ensure that older people are able to live independently and actively.

The strategy is a key document for the future of older people's health and care in the UK. It sets out a vision for the future of older people's health and care, and sets out a number of key objectives for the future of older people's health and care. The strategy is a key document for the future of older people's health and care in the UK.

the 1990s, the number of people in the UK who are aged 65 and over has increased by 1.5 million (1990–1999) and is projected to increase by a further 1.5 million by 2010 (Office for National Statistics 2000). The number of people aged 65 and over is projected to increase by 2.5 million by 2020 (Office for National Statistics 2000).

There is a growing awareness of the need to develop strategies to meet the needs of the ageing population. The Department of Health (1999) has published a strategy for the ageing population, which sets out the government's commitment to improve the health and well-being of older people. The strategy is based on three main principles: (1) to improve the health and well-being of older people; (2) to ensure that older people are able to live independently; and (3) to ensure that older people are able to participate in society.

the 1990s, the number of people in the world who are under 15 years of age has increased from 1.1 billion to 1.5 billion. The number of people aged 65 and over has increased from 200 million to 350 million. The number of people aged 15–64 years has increased from 1.5 billion to 2.0 billion.

There are a number of factors which have contributed to the increase in the number of people in the world who are under 15 years of age. These include a decline in the death rate, a decline in the birth rate, and a decline in the rate of migration.

The decline in the death rate has been the result of a number of factors, including a decline in the incidence of infectious diseases, a decline in the incidence of non-communicable diseases, and a decline in the incidence of violence.

The decline in the birth rate has been the result of a number of factors, including a decline in the number of children born to each woman, a decline in the number of women who are married, and a decline in the number of women who are employed.

The decline in the rate of migration has been the result of a number of factors, including a decline in the number of people who are emigrating, a decline in the number of people who are immigrating, and a decline in the number of people who are returning to their country of origin.

The increase in the number of people in the world who are aged 65 and over has been the result of a number of factors, including a decline in the death rate, a decline in the birth rate, and a decline in the rate of migration.
