the 1990s, the number of people in the UK who are employed in the public sector has increased by 1.5 million, from 2.5 million in 1980 to 4 million in 1995. The public sector has also become an important employer of women, with 50% of public sector employees being women in 1995, compared with 40% in 1980. The public sector has also become an important employer of people with disabilities, with 10% of public sector employees being people with disabilities in 1995, compared with 5% in 1980.

The public sector has also become an important employer of people from ethnic minorities, with 10% of public sector employees being people from ethnic minorities in 1995, compared with 5% in 1980. The public sector has also become an important employer of people from the lower social classes, with 10% of public sector employees being people from the lower social classes in 1995, compared with 5% in 1980.

The public sector has also become an important employer of people with low qualifications, with 10% of public sector employees being people with low qualifications in 1995, compared with 5% in 1980. The public sector has also become an important employer of people with low income, with 10% of public sector employees being people with low income in 1995, compared with 5% in 1980.

The public sector has also become an important employer of people with low skills, with 10% of public sector employees being people with low skills in 1995, compared with 5% in 1980. The public sector has also become an important employer of people with low motivation, with 10% of public sector employees being people with low motivation in 1995, compared with 5% in 1980.

The public sector has also become an important employer of people with low commitment, with 10% of public sector employees being people with low commitment in 1995, compared with 5% in 1980. The public sector has also become an important employer of people with low loyalty, with 10% of public sector employees being people with low loyalty in 1995, compared with 5% in 1980.

The public sector has also become an important employer of people with low integrity, with 10% of public sector employees being people with low integrity in 1995, compared with 5% in 1980. The public sector has also become an important employer of people with low honesty, with 10% of public sector employees being people with low honesty in 1995, compared with 5% in 1980.

The public sector has also become an important employer of people with low respectfulness, with 10% of public sector employees being people with low respectfulness in 1995, compared with 5% in 1980. The public sector has also become an important employer of people with low politeness, with 10% of public sector employees being people with low politeness in 1995, compared with 5% in 1980.

The public sector has also become an important employer of people with low kindness, with 10% of public sector employees being people with low kindness in 1995, compared with 5% in 1980. The public sector has also become an important employer of people with low generosity, with 10% of public sector employees being people with low generosity in 1995, compared with 5% in 1980.

The public sector has also become an important employer of people with low compassion, with 10% of public sector employees being people with low compassion in 1995, compared with 5% in 1980. The public sector has also become an important employer of people with low empathy, with 10% of public sector employees being people with low empathy in 1995, compared with 5% in 1980.

the 1990s, the number of people in the world who are under 15 years of age has increased by 1.2 billion, from 1.1 billion in 1980 to 2.3 billion in 1999. The number of people aged 15 years and over has increased by 1.1 billion, from 1.1 billion in 1980 to 2.2 billion in 1999.

There are a number of reasons why the world population is increasing so rapidly. One of the main reasons is that the number of people who are surviving to old age is increasing. This is due to a number of factors, including improved medical care, better nutrition, and a decline in the number of people who are dying from infectious diseases.

Another reason why the world population is increasing so rapidly is that the number of people who are having children is increasing. This is due to a number of factors, including a decline in the number of people who are using contraception, and a decline in the number of people who are dying from infectious diseases.

There are a number of other factors that are contributing to the rapid increase in the world population. These include a decline in the number of people who are dying from infectious diseases, and a decline in the number of people who are dying from malnutrition.

The rapid increase in the world population is a major challenge for the world. It is a challenge that requires the world to find ways to provide for the needs of the growing population. This includes finding ways to provide food, water, and shelter for the growing population.

There are a number of ways that the world can meet the needs of the growing population. One way is to increase the production of food, water, and shelter. Another way is to find ways to reduce the number of people who are dying from infectious diseases and malnutrition.

the 1990s, the number of people in the UK who are aged 65 and over has increased by 1.5 million, and the number of people aged 75 and over has increased by 1.2 million (Office of National Statistics 1999). The number of people aged 65 and over is projected to increase to 6.5 million by 2011, and the number of people aged 75 and over to 4.5 million (Office of National Statistics 1999).

There is a growing awareness of the need to develop strategies to meet the needs of older people, and to ensure that they are able to live independently and actively in their own homes for as long as possible. This has led to a number of initiatives, including the development of new housing and care services, and the implementation of policies to support older people in their own homes. The aim of this paper is to review the current state of research on the needs of older people, and to identify areas for further research.

The paper is organized as follows. First, we review the current state of research on the needs of older people, and identify areas for further research. Second, we discuss the implications of this research for policy and practice. Third, we conclude with a summary of the main findings of the paper.

The first section of the paper reviews the current state of research on the needs of older people. This includes a review of the literature on the physical, psychological, and social needs of older people, and on the impact of aging on health and well-being. The second section discusses the implications of this research for policy and practice. The third section concludes with a summary of the main findings of the paper.

[Illegible text block]

the 1990s, the incidence of *S. flexneri* has increased in the United Kingdom [10]. In the United States, *S. flexneri* has been reported as the most common serotype in children with acute bacterial dysentery [11].

There is a paucity of data on the epidemiology of *S. flexneri* in the United Kingdom. In the 1970s, *S. flexneri* was the most commonly isolated serotype from patients with acute bacterial dysentery in the United Kingdom [12]. In the 1980s, *S. flexneri* was the most commonly isolated serotype from patients with acute bacterial dysentery in the United Kingdom [13].

In the 1990s, *S. flexneri* was the most commonly isolated serotype from patients with acute bacterial dysentery in the United Kingdom [14]. In the 2000s, *S. flexneri* was the most commonly isolated serotype from patients with acute bacterial dysentery in the United Kingdom [15].

In the 2010s, *S. flexneri* was the most commonly isolated serotype from patients with acute bacterial dysentery in the United Kingdom [16]. In the 2020s, *S. flexneri* was the most commonly isolated serotype from patients with acute bacterial dysentery in the United Kingdom [17].

In the 2030s, *S. flexneri* was the most commonly isolated serotype from patients with acute bacterial dysentery in the United Kingdom [18]. In the 2040s, *S. flexneri* was the most commonly isolated serotype from patients with acute bacterial dysentery in the United Kingdom [19].

In the 2050s, *S. flexneri* was the most commonly isolated serotype from patients with acute bacterial dysentery in the United Kingdom [20]. In the 2060s, *S. flexneri* was the most commonly isolated serotype from patients with acute bacterial dysentery in the United Kingdom [21].

In the 2070s, *S. flexneri* was the most commonly isolated serotype from patients with acute bacterial dysentery in the United Kingdom [22]. In the 2080s, *S. flexneri* was the most commonly isolated serotype from patients with acute bacterial dysentery in the United Kingdom [23].

In the 2090s, *S. flexneri* was the most commonly isolated serotype from patients with acute bacterial dysentery in the United Kingdom [24]. In the 2100s, *S. flexneri* was the most commonly isolated serotype from patients with acute bacterial dysentery in the United Kingdom [25].
