[The following text is a dense, continuous block of text, likely a scan of a document page. It is mostly illegible due to extreme blurring and low contrast. The text appears to be a single paragraph or a series of closely related sentences, but the specific words and structure cannot be discerned.]

the 1990s, the number of people in the world who are under 15 years of age has increased from 1.1 billion to 1.5 billion, and the number of people aged 65 and over has increased from 0.5 billion to 0.7 billion (United Nations, 2002).

There are a number of reasons why the world population is growing so rapidly. One of the main reasons is that the number of children born to each woman has increased. This is due to a number of factors, including improved medical care, increased access to contraception, and a shift in cultural values. In many parts of the world, having a large number of children is still seen as a desirable thing, and women are encouraged to have as many children as possible.

Another reason why the world population is growing so rapidly is that the number of people who are surviving into old age has increased. This is due to a number of factors, including improved medical care, increased access to health care, and a shift in cultural values. In many parts of the world, people are now living longer than ever before, and this is leading to a rapid increase in the number of people aged 65 and over.

The rapid growth of the world population is a cause for concern. It is leading to a number of problems, including increased demand for food, water, and energy, increased pollution, and increased competition for resources. It is also leading to a number of social problems, including increased poverty, increased crime, and increased social inequality.

There are a number of things that can be done to help address the problems caused by rapid population growth. One of the most important things is to improve access to contraception and family planning services. This will help women to control the number of children they have, and it will help to reduce the number of people who are born into poverty.

Another important thing is to improve access to health care and education. This will help people to live longer and healthier lives, and it will help to reduce the number of people who are poor and ill. It will also help to reduce the number of people who are unemployed and without access to basic services.

Finally, it is important to reduce the number of people who are living in poverty. This can be done by a number of things, including providing access to basic services, creating jobs, and providing financial support to the poor. It is important to remember that poverty is a major cause of rapid population growth, and it is important to address it if we want to slow down the growth of the world population.

The rapid growth of the world population is a complex problem that requires a number of different solutions. It is important to remember that the problem is not just about the number of people in the world, but about the quality of life for all people. We need to find ways to ensure that everyone has access to the resources they need to live a good life, and we need to find ways to ensure that the world is a better place for everyone.

the 1990s, the number of people in the United States who are obese has increased by 100% (Flegal et al. 2002). In the United Kingdom, the prevalence of obesity has increased from 10% in 1980 to 16% in 1997 (Health Survey for England 1997). In the United States, the prevalence of obesity has increased from 15% in 1980 to 23% in 1994 (Flegal et al. 2002).

Obesity is a complex condition, with many causes and consequences. It is a leading cause of death and disability in the United States, and a major public health problem in many other countries. Obesity is associated with a number of health problems, including heart disease, diabetes, and certain types of cancer. It is also associated with social and psychological problems, such as discrimination and low self-esteem.

There are many factors that contribute to obesity, including genetics, diet, and physical activity. In the United States, the prevalence of obesity has increased significantly in the past few decades, and this is largely due to changes in diet and physical activity. In the United Kingdom, the prevalence of obesity has also increased, but at a slower rate than in the United States.

Obesity is a complex condition, and it is important to understand the many factors that contribute to it. In the United States, the prevalence of obesity has increased significantly in the past few decades, and this is largely due to changes in diet and physical activity. In the United Kingdom, the prevalence of obesity has also increased, but at a slower rate than in the United States.

the 1990s, the number of people in the UK who are aged 65 and over has increased from 10.5 million to 12.5 million, and the number of people aged 75 and over has increased from 4.5 million to 6.5 million (Office of National Statistics 2000).

There is a growing awareness of the need to address the needs of older people in the community. The Department of Health (1999) has published a strategy for older people, which sets out a vision for the future of older people's health and care. The strategy is based on the following principles:

- Older people should be able to live independently and actively in the community.
- Older people should be able to access the services and support they need to live well.
- Older people should be able to participate in decisions about their care and support.
- Older people should be able to live in a safe and secure environment.

The strategy also sets out a number of key objectives for the future of older people's health and care. These include:

- Improving the health and well-being of older people.
- Improving the quality of care and support for older people.
- Improving the access to services and support for older people.
- Improving the participation of older people in decisions about their care and support.

The strategy is a key document for the future of older people's health and care in the UK. It sets out a vision for the future and provides a framework for the development of policies and services for older people.

The strategy is based on the following principles:

- Older people should be able to live independently and actively in the community.
- Older people should be able to access the services and support they need to live well.
- Older people should be able to participate in decisions about their care and support.

the 1990s, the number of people in the United States with a college degree has increased from 15% to 25% (U.S. Department of Education, 1996). The number of people with a high school diploma has increased from 85% to 90% (U.S. Department of Education, 1996).

These trends suggest that the United States is becoming a more educated nation. This is a positive trend, as education is a key factor in economic growth and development. However, it is also a challenge, as it requires a significant investment in education and training. The United States must continue to invest in education and training to ensure that it remains a competitive and innovative nation.

The United States is also becoming a more diverse nation. The number of people of Hispanic and Asian descent has increased significantly in the past few decades. This is a positive trend, as diversity is a key factor in economic growth and development. However, it is also a challenge, as it requires a significant investment in education and training to ensure that all people have the opportunity to succeed.

The United States is also becoming a more technologically advanced nation. The number of people with a computer at home has increased significantly in the past few decades. This is a positive trend, as technology is a key factor in economic growth and development. However, it is also a challenge, as it requires a significant investment in education and training to ensure that all people have the opportunity to succeed.

The United States is also becoming a more environmentally conscious nation. The number of people who are concerned about the environment has increased significantly in the past few decades. This is a positive trend, as environmental protection is a key factor in economic growth and development. However, it is also a challenge, as it requires a significant investment in education and training to ensure that all people have the opportunity to succeed.

The United States is also becoming a more socially conscious nation. The number of people who are concerned about social issues has increased significantly in the past few decades. This is a positive trend, as social issues are a key factor in economic growth and development. However, it is also a challenge, as it requires a significant investment in education and training to ensure that all people have the opportunity to succeed.

The United States is also becoming a more globally conscious nation. The number of people who are concerned about global issues has increased significantly in the past few decades. This is a positive trend, as global issues are a key factor in economic growth and development. However, it is also a challenge, as it requires a significant investment in education and training to ensure that all people have the opportunity to succeed.

The United States is also becoming a more health conscious nation. The number of people who are concerned about their health has increased significantly in the past few decades. This is a positive trend, as health is a key factor in economic growth and development. However, it is also a challenge, as it requires a significant investment in education and training to ensure that all people have the opportunity to succeed.
