the 1990s, the incidence of *S. flexneri* infections in the United Kingdom has increased, and the incidence of *S. flexneri* infection in the United States has increased in the 1980s and 1990s [10, 11].

There is a paucity of data on the incidence of *S. flexneri* infection in the United Kingdom. In the 1980s, *S. flexneri* was the second most commonly isolated enteric pathogen from patients with acute gastroenteritis in the United Kingdom [12]. In the 1990s, *S. flexneri* was the most commonly isolated enteric pathogen from patients with acute gastroenteritis in the United Kingdom [13].

The purpose of this study was to determine the incidence of *S. flexneri* infection in the United Kingdom. The study was conducted in the United Kingdom, where the incidence of *S. flexneri* infection is high, and the incidence of *S. flexneri* infection is high in the United Kingdom.

The study was conducted in the United Kingdom, where the incidence of *S. flexneri* infection is high, and the incidence of *S. flexneri* infection is high in the United Kingdom.

The study was conducted in the United Kingdom, where the incidence of *S. flexneri* infection is high, and the incidence of *S. flexneri* infection is high in the United Kingdom.

the 1990s, the number of people in the world who are under 15 years of age has increased from 1.1 billion to 1.5 billion, and the number of people aged 65 and over has increased from 0.5 billion to 0.7 billion (United Nations 1999).

There are a number of reasons why the world population is growing so rapidly. One of the main reasons is that the number of children born to each woman has increased. This is due to a number of factors, including improved medical care, increased access to contraception, and a shift in cultural values. In many parts of the world, children are now seen as a source of labour and income, rather than as a burden.

Another reason for population growth is that people are living longer. This is due to a number of factors, including improved medical care, better nutrition, and a shift in lifestyle. In many parts of the world, people are now living longer than ever before, and this is leading to a rapid increase in the number of people aged 65 and over.

Population growth is a major challenge for the world. It is leading to a rapid increase in the number of people in the world, and this is putting a strain on the environment and on the world's resources. It is also leading to a rapid increase in the number of people aged 65 and over, and this is leading to a rapid increase in the number of people who are dependent on others for care.

There are a number of ways in which the world can deal with population growth. One way is to improve medical care and to increase access to contraception. Another way is to shift cultural values so that children are no longer seen as a source of labour and income. A third way is to improve nutrition and to shift lifestyle so that people are living longer.

Population growth is a complex issue, and there are a number of different ways in which it can be dealt with. It is important to find a way to deal with population growth that is sustainable and that does not put a strain on the environment and on the world's resources.
