the 1990s, the number of people in the UK who are aged 65 and over has increased by 1.5 million (1990–1999) and is projected to increase by a further 1.5 million by 2010 (Office for National Statistics, 2000). The number of people aged 65 and over is projected to increase by 2.5 million by 2020 (Office for National Statistics, 2000).

There is a growing awareness of the need to develop strategies to meet the needs of the ageing population. The Department of Health (1999) has identified the need to develop a 'new paradigm' for the care of the elderly. This paradigm is based on the principle of 'active ageing', which is the process of maintaining and enhancing the functional ability of older people to live independently and to participate in social and economic activities. The Department of Health (1999) has identified a number of key areas for action in order to achieve this paradigm, including: (1) the development of a 'new paradigm' for the care of the elderly; (2) the development of a 'new paradigm' for the care of the elderly; (3) the development of a 'new paradigm' for the care of the elderly.

the 1990s, the number of people in the UK who are employed in the public sector has increased by 1.5 million (from 2.5 million in 1980 to 4 million in 1999) and the number of people in the public sector who are employed in the health sector has increased by 1.2 million (from 1.3 million in 1980 to 2.5 million in 1999) (Department of Health 2000).

There is a growing emphasis on the need to improve the quality of care provided by the public sector. This has led to a number of initiatives, including the introduction of the Health Care Act 1999, which sets out a framework for the regulation of health care providers, and the introduction of the Health Care Commission, which is responsible for monitoring and improving the quality of care provided by the public sector. The Health Care Commission has a number of functions, including the monitoring and evaluation of health care providers, the investigation of complaints, and the promotion of good practice.

The Health Care Commission has a number of powers, including the power to issue orders requiring health care providers to improve their performance, the power to suspend or remove health care providers from the register, and the power to refer health care providers to the courts. The Health Care Commission also has a number of functions, including the monitoring and evaluation of health care providers, the investigation of complaints, and the promotion of good practice.
