the 1990s, the number of people in the UK who are employed in the public sector has increased by 1.5 million, from 2.5 million in 1980 to 4 million in 1995. The public sector has also become an important employer of women, with 5.5 million women employed in the public sector in 1995, compared with 4.5 million in 1980.

There are a number of reasons why the public sector has become an important employer of women. One reason is that the public sector has a high proportion of women in its workforce. In 1995, 88% of the public sector workforce were women, compared with 78% in 1980. This is due to a number of factors, including the fact that the public sector has a high proportion of jobs that are traditionally held by women, such as teaching, nursing, and social work.

Another reason why the public sector has become an important employer of women is that it has a high proportion of jobs that are full-time. In 1995, 68% of the public sector workforce were employed full-time, compared with 58% in 1980. This is due to a number of factors, including the fact that the public sector has a high proportion of jobs that are essential to the functioning of the state, such as the police, the fire service, and the health service.

A third reason why the public sector has become an important employer of women is that it has a high proportion of jobs that are well-paid. In 1995, the average salary of a public sector employee was £18,000, compared with £15,000 in 1980. This is due to a number of factors, including the fact that the public sector has a high proportion of jobs that are in the higher grades of the public sector pay scale, such as the senior civil service and the senior judiciary.

There are a number of other reasons why the public sector has become an important employer of women. For example, the public sector has a high proportion of jobs that are secure, and a high proportion of jobs that offer good career prospects. These factors, along with the others mentioned above, have made the public sector an attractive employer for women.

The public sector has also become an important employer of women because it has a high proportion of jobs that are flexible. In 1995, 28% of the public sector workforce were employed on flexible contracts, compared with 18% in 1980. This is due to a number of factors, including the fact that the public sector has a high proportion of jobs that are part-time or seasonal, and a high proportion of jobs that are temporary or fixed-term.

There are a number of other reasons why the public sector has become an important employer of women. For example, the public sector has a high proportion of jobs that are well-located, and a high proportion of jobs that offer good benefits. These factors, along with the others mentioned above, have made the public sector an attractive employer for women.

The public sector has also become an important employer of women because it has a high proportion of jobs that are well-structured. In 1995, 68% of the public sector workforce were employed in jobs that were well-structured, compared with 58% in 1980. This is due to a number of factors, including the fact that the public sector has a high proportion of jobs that are in the higher grades of the public sector pay scale, and a high proportion of jobs that offer good career prospects.

There are a number of other reasons why the public sector has become an important employer of women. For example, the public sector has a high proportion of jobs that are well-paid, and a high proportion of jobs that offer good benefits. These factors, along with the others mentioned above, have made the public sector an attractive employer for women.

the 1990s, the number of people in the UK who are aged 65 and over has increased by 1.5 million, and the number of people aged 75 and over has increased by 1.2 million (Office of National Statistics 1999). The number of people aged 85 and over has increased by 0.5 million in the same period.

There is a growing awareness of the need to develop services to meet the needs of the ageing population. The Department of Health (1999) has published a strategy for ageing, which sets out the government's commitment to improve the lives of older people. The strategy is based on three main principles: (1) to ensure that older people have the opportunity to live independently; (2) to ensure that older people have access to the services they need; and (3) to ensure that older people are treated with respect and dignity.

The strategy is based on the following assumptions: (1) that older people are a valuable resource; (2) that older people have the right to live independently; (3) that older people have the right to access the services they need; and (4) that older people should be treated with respect and dignity. The strategy is based on the following principles: (1) to ensure that older people have the opportunity to live independently; (2) to ensure that older people have access to the services they need; and (3) to ensure that older people are treated with respect and dignity.

The strategy is based on the following principles: (1) to ensure that older people have the opportunity to live independently; (2) to ensure that older people have access to the services they need; and (3) to ensure that older people are treated with respect and dignity.
