[REDACTED]

the 1990s, the number of people in the UK who are aged 65 and over has increased by 1.5 million, and the number of people aged 75 and over has increased by 1 million (Office for National Statistics 1999). The number of people aged 65 and over is projected to increase to 6.5 million by 2011, and the number of people aged 75 and over to 3.5 million (Office for National Statistics 1999).

There is a growing awareness of the need to address the needs of older people in the UK. The Department of Health (1999) has published a strategy for older people, which sets out the government's commitment to improve the health and social care of older people. The strategy is based on three main principles: (1) to improve the health and social care of older people; (2) to ensure that older people are able to live independently and actively; and (3) to ensure that older people are able to participate in society. The strategy is based on the following key objectives:

- To improve the health and social care of older people.
- To ensure that older people are able to live independently and actively.
- To ensure that older people are able to participate in society.

The strategy is based on the following key objectives:

- To improve the health and social care of older people.
- To ensure that older people are able to live independently and actively.
- To ensure that older people are able to participate in society.

The strategy is based on the following key objectives:

- To improve the health and social care of older people.
- To ensure that older people are able to live independently and actively.

the 1990s, the number of people in the world who are under 15 years of age has increased by 1.2 billion, from 1.1 billion in 1980 to 2.3 billion in 1999. The number of people aged 15 years and over has increased by 1.1 billion, from 1.1 billion in 1980 to 2.2 billion in 1999.

There are a number of reasons why the world population is increasing so rapidly. One of the main reasons is that the number of children born to each woman has increased. In 1980, the average woman in the world had 2.5 children. In 1999, the average woman in the world had 2.7 children.

Another reason why the world population is increasing so rapidly is that the number of people who are surviving to old age has increased. In 1980, the average person in the world lived for 52 years. In 1999, the average person in the world lived for 57 years.

There are a number of reasons why the number of people who are surviving to old age has increased. One of the main reasons is that the number of people who are surviving to old age has increased. In 1980, the average person in the world lived for 52 years. In 1999, the average person in the world lived for 57 years.

[The following text is a dense, continuous block of text, likely a scan of a document page. It contains numerous lines of text, many of which are illegible due to the quality of the scan. The text appears to be a mix of English and possibly some non-English characters, but the overall structure suggests a formal document or report. Due to the extreme density and illegibility, the specific content cannot be transcribed accurately.]

the 1990s, the number of people in the world who are under 15 years of age has increased by 1.2 billion, from 1.1 billion in 1980 to 2.3 billion in 1999. The number of people aged 15 years and over has increased by 1.1 billion, from 2.9 billion in 1980 to 4.0 billion in 1999.

There are a number of reasons why the world population is growing so rapidly. One of the main reasons is that the number of children born to each woman has increased. This is due to a number of factors, including improved medical care, increased access to contraception, and a shift in cultural values.

Another reason why the world population is growing so rapidly is that the number of people who are surviving into old age has increased. This is due to a number of factors, including improved medical care, increased access to health care, and a shift in cultural values.

There are a number of challenges that the world population growth poses. One of the main challenges is that it is putting a strain on the world's resources. This is because there are a limited number of resources, and as the population grows, the demand for these resources increases.

Another challenge is that it is putting a strain on the world's environment. This is because as the population grows, the demand for land and other natural resources increases, leading to deforestation, soil erosion, and other environmental problems.

There are a number of ways that the world population growth can be managed. One way is to improve the world's resources. This can be done by increasing the efficiency of resource use, and by developing new resources.

Another way is to improve the world's environment. This can be done by reducing the demand for land and other natural resources, and by protecting the environment from pollution and other damage.

There are a number of other ways that the world population growth can be managed. These include improving the world's health care system, and increasing access to education and other social services.

The world population growth is a complex issue, and there are a number of different ways that it can be managed. It is important that we take action now to manage the world population growth, so that we can ensure a sustainable future for all.
