the 1990s, the number of people in the UK who are aged 65 and over has increased by 1.5 million (1990–1999) and is projected to increase by a further 1.5 million by 2010 (Office for National Statistics, 2000). The number of people aged 65 and over is projected to increase by 2.5 million by 2020 (Office for National Statistics, 2000).

There is a growing awareness of the need to develop strategies to meet the needs of the ageing population. The Department of Health (1999) has published a strategy for the ageing population, which sets out the government's commitment to improve the health and well-being of older people. The strategy is based on three main principles: (1) to improve the health and well-being of older people; (2) to ensure that older people are able to live independently; and (3) to ensure that older people are able to participate in society.

The strategy is based on three main principles: (1) to improve the health and well-being of older people; (2) to ensure that older people are able to live independently; and (3) to ensure that older people are able to participate in society. the 1990s, the number of people in the UK who are aged 65 and over has increased by 1.5 million, and the number of people aged 75 and over by 1.2 million (Office for National Statistics 1999). The number of people aged 85 and over is projected to increase by 1.5 million by the year 2020 (Office for National Statistics 1999).

There is a growing awareness of the need to develop services to meet the needs of the ageing population. The Department of Health (1999) has set out a strategy for the future of health care for older people. The strategy is based on the principle that older people should be able to live in their own homes for as long as possible, and that health care should be provided in a way that is appropriate to their needs. The strategy is based on the following principles:

- Older people should be able to live in their own homes for as long as possible.
- Health care should be provided in a way that is appropriate to the needs of older people.
- Older people should be able to access health care services when they need them.
- Older people should be able to participate in decisions about their health care.

The strategy is based on the principle that older people should be able to live in their own homes for as long as possible. This means that health care services should be developed in a way that allows older people to remain in their own homes for as long as possible. This may involve providing services such as home visits, day care, and respite care.

Health care should be provided in a way that is appropriate to the needs of older people. This means that health care services should be developed in a way that takes into account the physical, mental, and social needs of older people. This may involve providing services such as health promotion, disease prevention, and rehabilitation.

Older people should be able to access health care services when they need them. This means that health care services should be developed in a way that ensures that older people can access services when they need them. This may involve providing services such as 24-hour helplines, out-of-hours clinics, and home visits.

Older people should be able to participate in decisions about their health care. This means that health care services should be developed in a way that allows older people to participate in decisions about their health care. This may involve providing services such as patient education, shared decision-making, and advance care planning.

The strategy is based on the principle that older people should be able to live in their own homes for as long as possible.
