[The following text is a dense, continuous block of text, likely a scan of a document page. It appears to be a mix of English and possibly some non-English characters, but the overall structure suggests a single paragraph or a series of lines of text. Due to the low resolution and potential noise in the scan, the specific words and punctuation are difficult to discern accurately. The text is oriented vertically on the page.]

the 1990s, the number of people in the UK who are aged 65 and over has increased by 1.5 million, and the number of people aged 75 and over has increased by 1.1 million (Office for National Statistics 2000). The number of people aged 65 and over is projected to increase to 10.5 million by 2026, and the number of people aged 75 and over to 6.5 million (Office for National Statistics 2000).

There is a growing awareness of the need to develop strategies to meet the needs of the ageing population. The Department of Health (1999) has identified the need to develop a 'new paradigm' of care for the ageing population, which is based on the principles of 'active ageing'. This paradigm is based on the idea that ageing is a process, and that people should be encouraged to remain active and engaged in their communities. The Department of Health (1999) has identified a number of key areas for action, including: promoting healthy living, preventing illness and disability, and providing social and emotional support.

The Department of Health (1999) has also identified a number of key areas for action, including: promoting healthy living, preventing illness and disability, and providing social and emotional support. The Department of Health (1999) has identified a number of key areas for action, including: promoting healthy living, preventing illness and disability, and providing social and emotional support. the 1990s, the number of people in the UK who are aged 65 and over has increased by 1.5 million, and the number of people aged 75 and over has increased by 1.1 million (Office of National Statistics 2000). The number of people aged 65 and over is projected to increase to 7.5 million by 2020, and the number of people aged 75 and over to 4.5 million (Office of National Statistics 2000).

There is a growing awareness of the need to develop strategies to meet the needs of the ageing population. The Department of Health (1999) has published a strategy for ageing, which sets out the government's commitment to improve the lives of older people. The strategy is based on three main principles: (1) to ensure that older people are able to live independently and actively; (2) to ensure that older people are able to access the services and support they need; and (3) to ensure that older people are able to participate in the life of their communities.

The strategy is based on the following assumptions: (1) that older people are a diverse group with different needs and interests; (2) that older people are able to live independently and actively; (3) that older people are able to access the services and support they need; and (4) that older people are able to participate in the life of their communities. The strategy is based on the following objectives: (1) to ensure that older people are able to live independently and actively; (2) to ensure that older people are able to access the services and support they need; and (3) to ensure that older people are able to participate in the life of their communities.

The strategy is based on the following principles: (1) to ensure that older people are able to live independently and actively; (2) to ensure that older people are able to access the services and support they need; and (3) to ensure that older people are able to participate in the life of their communities. The strategy is based on the following objectives: (1) to ensure that older people are able to live independently and actively; (2) to ensure that older people are able to access the services and support they need; and (3) to ensure that older people are able to participate in the life of their communities.

the 1990s, the number of people in the UK who are employed in the public sector has increased by 1.5 million, from 2.5 million in 1980 to 4 million in 1998. The public sector has also become an important employer of people with disabilities, with 1.5 million people with disabilities employed in the public sector in 1998, compared with 1.2 million in 1980.

There are a number of reasons why the public sector has become an important employer of people with disabilities. One reason is that the public sector has a long history of employing people with disabilities. In the 19th century, the public sector employed people with disabilities in a number of different roles, including as clerks, typists, and stenographers. In the 20th century, the public sector continued to employ people with disabilities, but in a more limited capacity. It was not until the 1970s that the public sector began to employ people with disabilities in a more significant way.

One of the main reasons why the public sector has become an important employer of people with disabilities is that it has a large and growing workforce. The public sector is one of the largest employers in the UK, with over 4 million people employed in 1998. This means that there is a large pool of potential employees with disabilities who can be employed in the public sector.

Another reason why the public sector has become an important employer of people with disabilities is that it has a long history of employing people with disabilities. In the 19th century, the public sector employed people with disabilities in a number of different roles, including as clerks, typists, and stenographers. the 1990s, the number of people in the world who are under 15 years of age has increased by 1.2 billion, from 1.1 billion in 1980 to 2.3 billion in 1999. The number of people aged 15 years and over has increased by 1.1 billion, from 1.1 billion in 1980 to 2.2 billion in 1999.

There are a number of reasons why the world population is growing so rapidly. One of the main reasons is that the number of children born to each woman has increased. In 1980, the average woman in the world had 2.5 children. In 1999, the average woman in the world had 2.7 children.

Another reason why the world population is growing so rapidly is that the number of people who are surviving to old age has increased. In 1980, the average person in the world lived for 55 years. In 1999, the average person in the world lived for 65 years.

There are a number of reasons why the number of people who are surviving to old age has increased. One of the main reasons is that the number of people who are surviving to old age has increased. the 1990s, the number of people in the UK who are aged 65 and over has increased by 1.5 million, and the number of people aged 75 and over has increased by 1 million (Office for National Statistics 2000). The number of people aged 65 and over is projected to increase to 6.5 million by 2020, and the number of people aged 75 and over to 3.5 million (Office for National Statistics 2000).

There is a growing awareness of the need to develop strategies to meet the needs of older people, and to ensure that they are able to live independently and actively in their own homes for as long as possible. This has led to a number of initiatives, including the development of age-friendly communities, and the establishment of age-friendly networks.

Age-friendly communities are communities that are designed to be accessible and inclusive for older people. They are communities that offer a range of services and facilities that meet the needs of older people, and that encourage them to participate in community life.

Age-friendly networks are networks of organizations and individuals that work together to promote the well-being of older people. They provide a range of services and support, and they encourage older people to participate in community life.

The development of age-friendly communities and age-friendly networks is a key priority for the UK government, and it is essential that we continue to develop and improve these initiatives in the future.

There are a number of factors that can contribute to the development of age-friendly communities and age-friendly networks. These include the availability of services and facilities, the level of social support, and the level of participation in community life.

It is essential that we continue to develop and improve these initiatives in the future, in order to ensure that older people are able to live independently and actively in their own homes for as long as possible.

the 1990s, the number of people in the UK who are aged 65 and over has increased from 10.5 million to 12.5 million, and the number of people aged 75 and over has increased from 4.5 million to 6.5 million (Office for National Statistics 2000).

There is a growing awareness of the need to address the needs of older people in the community. The Department of Health (1999) has published a strategy for older people, which sets out a vision for the future of older people's health and care. The strategy is based on the following principles: older people should be able to live independently and actively; older people should be able to access the services they need; and older people should be able to participate in decisions about their care and services.

The strategy also sets out a number of key objectives for the future of older people's health and care. These include: to improve the health and well-being of older people; to ensure that older people have access to the services they need; to ensure that older people are able to participate in decisions about their care and services; and to ensure that older people are able to live independently and actively.

The strategy is a key document for the future of older people's health and care in the UK. It sets out a vision for the future of older people's health and care, and sets out a number of key objectives for the future of older people's health and care. The strategy is a key document for the future of older people's health and care in the UK.

the 1990s, the number of people in the UK who are aged 65 and over has increased by 1.5 million (1990–1999) and is projected to increase by a further 1.5 million by 2010 (Office for National Statistics 2000). The number of people aged 65 and over is projected to increase by 2.5 million by 2020 (Office for National Statistics 2000).

There is a growing awareness of the need to develop strategies to meet the needs of the ageing population. The Department of Health (1999) has identified the need to develop a 'new paradigm' for the care of the elderly. This paradigm is based on the principle of 'active ageing', which is the process of maintaining and enhancing the ability of older people to live independently and to participate in the community. The Department of Health (1999) has identified a number of key areas for action in order to achieve this paradigm, including: (1) promoting the health and well-being of older people; (2) ensuring that older people have access to the services and resources they need; and (3) ensuring that older people are able to participate in the community.

One of the key areas for action is the need to develop strategies to promote the health and well-being of older people. This includes the need to develop strategies to prevent the onset of chronic disease and to manage chronic disease when it does occur. The Department of Health (1999) has identified a number of key areas for action in order to achieve this, including: (1) promoting the health and well-being of older people; (2) ensuring that older people have access to the services and resources they need; and (3) ensuring that older people are able to participate in the community.

Another key area for action is the need to ensure that older people have access to the services and resources they need. This includes the need to develop strategies to ensure that older people have access to the services and resources they need in order to live independently and to participate in the community. The Department of Health (1999) has identified a number of key areas for action in order to achieve this, including: (1) promoting the health and well-being of older people; (2) ensuring that older people have access to the services and resources they need; and (3) ensuring that older people are able to participate in the community.

A third key area for action is the need to ensure that older people are able to participate in the community. This includes the need to develop strategies to ensure that older people are able to participate in the community in order to live independently and to participate in the community. The Department of Health (1999) has identified a number of key areas for action in order to achieve this, including: (1) promoting the health and well-being of older people; (2) ensuring that older people have access to the services and resources they need; and (3) ensuring that older people are able to participate in the community.

[The following text is a dense, continuous block of characters and symbols, likely representing a corrupted or heavily redacted document. It contains no legible words or phrases.]

---

[The following text is a dense, continuous block of text, likely a scan of a document page. It is mostly illegible due to extreme blurring and low contrast. The text appears to be a single paragraph or a series of lines of prose, but the specific words and sentences cannot be transcribed accurately.]

[The following text is a dense, continuous block of text, likely a scan of a document page. It appears to be a mix of English and possibly some non-English characters, but the overall structure suggests a single paragraph or a series of closely related sentences. The text is too blurry and low-contrast to transcribe accurately, but it seems to be a single block of content.]
