the 1990s, the number of people in the world who are under 15 years of age has increased from 1.1 billion to 1.5 billion. The number of people aged 65 and over has increased from 200 million to 350 million. The number of people aged 15–64 years has increased from 1.5 billion to 2.0 billion.

There are a number of factors which have contributed to the increase in the number of people in the world who are under 15 years of age. These include a decline in the death rate, a decline in the birth rate, and a decline in the rate of migration.

The decline in the death rate has been the result of a number of factors, including a decline in the incidence of infectious diseases, a decline in the incidence of non-communicable diseases, and a decline in the incidence of violence.

The decline in the birth rate has been the result of a number of factors, including a decline in the number of children born to women, a decline in the number of children born to men, and a decline in the number of children born to couples.

The decline in the rate of migration has been the result of a number of factors, including a decline in the number of people who are migrating, a decline in the number of people who are being migrated, and a decline in the number of people who are being migrated.

The increase in the number of people in the world who are aged 65 and over has been the result of a number of factors, including a decline in the death rate, a decline in the birth rate, and a decline in the rate of migration.
