[The following text is a dense, continuous block of characters and symbols, likely representing a corrupted or heavily redacted document. It contains no legible words or phrases.]

[The following text is a dense, continuous block of text, likely a scan of a document page. It is mostly illegible due to extreme blurring and low contrast. The text appears to be a single paragraph or a series of lines of prose, but the specific words and sentences cannot be transcribed accurately.]

[REDACTED]

[The following text is a dense, continuous block of text, likely a scan of a document page. It is mostly illegible due to the quality of the scan and the density of the text. The text appears to be a single paragraph or a series of closely related sentences. The visible fragments of text are as follows:]

[Illegible text block]

[REDACTED]

[The following text is a dense, continuous block of text, likely a scan of a document page. It is mostly illegible due to extreme blurring and low contrast. The text appears to be a single paragraph or a series of closely related sentences, but the specific words and structure cannot be discerned.]

[The following text is a dense, continuous block of text, likely a scan of a document page. It appears to be a mix of English and possibly some non-English characters, but the overall structure suggests a single paragraph or a series of lines of text. Due to the low resolution and potential noise in the scan, the specific words and punctuation are difficult to discern accurately. The text is oriented vertically on the page.]

the 1990s, the number of people in the world who are under 15 years of age has increased from 1.1 billion to 1.5 billion. The number of people aged 65 and over has increased from 200 million to 350 million. The number of people aged 15–64 years has increased from 1.5 billion to 2.2 billion.

There are a number of factors which have contributed to the increase in the number of people in the world who are under 15 years of age. These factors include a decline in the death rate, a decline in the birth rate, and a decline in the rate of migration.

The decline in the death rate has been the most significant factor in the increase in the number of people in the world who are under 15 years of age. This decline has been due to a number of factors, including improvements in medical care, a decline in the incidence of infectious diseases, and a decline in the incidence of violence.

The decline in the birth rate has also contributed to the increase in the number of people in the world who are under 15 years of age. This decline has been due to a number of factors, including a decline in the number of children born to women, a decline in the number of children born to men, and a decline in the number of children born to couples.

The decline in the rate of migration has also contributed to the increase in the number of people in the world who are under 15 years of age. This decline has been due to a number of factors, including a decline in the number of people who are migrating from one country to another, a decline in the number of people who are migrating from one region to another, and a decline in the number of people who are migrating from one social class to another.

The increase in the number of people in the world who are under 15 years of age has a number of implications. These implications include a decline in the number of people who are in the workforce, a decline in the number of people who are paying taxes, and a decline in the number of people who are contributing to the economy.

The increase in the number of people in the world who are under 15 years of age also has a number of implications for the environment. These implications include a decline in the number of people who are using natural resources, a decline in the number of people who are polluting the environment, and a decline in the number of people who are contributing to climate change.

The increase in the number of people in the world who are under 15 years of age also has a number of implications for the future. These implications include a decline in the number of people who are living in poverty, a decline in the number of people who are living in slums, and a decline in the number of people who are living in the developing world.

The increase in the number of people in the world who are under 15 years of age also has a number of implications for the quality of life. These implications include a decline in the number of people who are healthy, a decline in the number of people who are educated, and a decline in the number of people who are employed.

The increase in the number of people in the world who are under 15 years of age also has a number of implications for the future of the world. These implications include a decline in the number of people who are living in peace, a decline in the number of people who are living in freedom, and a decline in the number of people who are living in a world that is free from violence.

The increase in the number of people in the world who are under 15 years of age also has a number of implications for the future of the world. These implications include a decline in the number of people who are living in a world that is free from poverty, a decline in the number of people who are living in a world that is free from hunger, and a decline in the number of people who are living in a world that is free from disease.

The increase in the number of people in the world who are under 15 years of age also has a number of implications for the future of the world. These implications include a decline in the number of people who are living in a world that is free from war, a decline in the number of people who are living in a world that is free from terrorism, and a decline in the number of people who are living in a world that is free from crime.

The increase in the number of people in the world who are under 15 years of age also has a number of implications for the future of the world. These implications include a decline in the number of people who are living in a world that is free from oppression, a decline in the number of people who are living in a world that is free from discrimination, and a decline in the number of people who are living in a world that is free from injustice.

the 1990s, the incidence of *S. flexneri* infections in the United Kingdom has increased, and the incidence of *S. flexneri* infection in the United States has increased in the 1980s and 1990s [10, 11].

There is a paucity of data on the incidence of *S. flexneri* infection in the United Kingdom. In the 1980s, *S. flexneri* was the second most commonly isolated serotype of *Shigella* from patients with shigellosis in the United Kingdom [12]. In the 1990s, *S. flexneri* was the most commonly isolated serotype of *Shigella* from patients with shigellosis in the United Kingdom [13].

The purpose of this study was to determine the incidence of *S. flexneri* infection in the United Kingdom in the 1990s. The study was conducted in the United Kingdom, where the incidence of *S. flexneri* infection is high, and the incidence of *S. flexneri* infection is increasing.

The study was conducted in the United Kingdom, where the incidence of *S. flexneri* infection is high, and the incidence of *S. flexneri* infection is increasing.

The study was conducted in the United Kingdom, where the incidence of *S. flexneri* infection is high, and the incidence of *S. flexneri* infection is increasing.

The study was conducted in the United Kingdom, where the incidence of *S. flexneri* infection is high, and the incidence of *S. flexneri* infection is increasing.

The study was conducted in the United Kingdom, where the incidence of *S. flexneri* infection is high, and the incidence of *S. flexneri* infection is increasing.

The study was conducted in the United Kingdom, where the incidence of *S. flexneri* infection is high, and the incidence of *S. flexneri* infection is increasing.
