[Illegible text block]

the 1990s, the number of people in the United States who are obese has increased by 100% (Flegal et al. 2002). In the United Kingdom, the prevalence of obesity has increased from 10% in 1980 to 15% in 1997 (Health Survey for England 1998). In the United States, the prevalence of obesity has increased from 15% in 1980 to 23% in 1994 (Flegal et al. 2002).

Obesity is a risk factor for a number of chronic diseases, including coronary heart disease, stroke, type 2 diabetes, and certain types of cancer (World Health Organization 1997). Obesity is also a risk factor for mental health problems, including depression and anxiety (Stunkard and Siskind 1997). The prevalence of obesity is increasing in many countries, and this is a public health problem that needs to be addressed.

There are a number of factors that contribute to the development of obesity, including genetics, diet, and physical activity. In the United States, the prevalence of obesity is higher in African Americans than in Caucasians (Flegal et al. 2002). In the United Kingdom, the prevalence of obesity is higher in people who are of African or Caribbean descent than in people who are of European descent (Health Survey for England 1998).
