[The following text is a dense, continuous block of characters and symbols, likely representing a corrupted or heavily redacted document. It contains no legible words or phrases.]

the 1990s, the number of people in the UK who are aged 65 and over has increased by 1.5 million, and the number of people aged 75 and over has increased by 1.2 million (Office of National Statistics 2000). The number of people aged 65 and over is projected to increase to 6.5 million by 2020, and the number of people aged 75 and over to 4.5 million (Office of National Statistics 2000).

There is a growing awareness of the need to develop strategies to meet the needs of the ageing population. The Department of Health (1999) has published a strategy for ageing, which sets out the government's commitment to improve the lives of older people. The strategy is based on three main principles: (1) to ensure that older people have the opportunity to live independently and actively; (2) to ensure that older people have access to the services and support they need; and (3) to ensure that older people are treated with respect and dignity.

The strategy is based on three main principles: (1) to ensure that older people have the opportunity to live independently and actively; (2) to ensure that older people have access to the services and support they need; and (3) to ensure that older people are treated with respect and dignity. The strategy is based on three main principles: (1) to ensure that older people have the opportunity to live independently and actively; (2) to ensure that older people have access to the services and support they need; and (3) to ensure that older people are treated with respect and dignity.

[The following text is a dense, continuous block of text, likely a scan of a document page. It appears to be a mix of English and possibly some non-English characters, but the overall structure suggests a single paragraph or a series of lines of text. Due to the low resolution and potential noise in the scan, the specific words and punctuation are difficult to discern accurately. The text is oriented vertically on the page.]

the 1990s, the number of people in the UK who are aged 65 and over has increased by 1.5 million (1990–1999) and is projected to increase by a further 1.5 million by 2010 (Office for National Statistics 2000). The number of people aged 65 and over is projected to increase by 2.5 million by 2020 (Office for National Statistics 2000).

There is a growing awareness of the need to develop strategies to meet the needs of the ageing population. The Department of Health (1999) has identified the need to develop a new approach to the care of older people, one that is based on the principles of partnership, shared responsibility and shared resources. The Department of Health (1999) has identified the need to develop a new approach to the care of older people, one that is based on the principles of partnership, shared responsibility and shared resources.

[The following text is a dense, continuous block of text, likely a scan of a document page. It contains numerous lines of text, many of which are illegible due to the quality of the scan. The text appears to be a mix of English and possibly some non-English characters, but the overall structure suggests a formal document or report. Due to the extreme density and illegibility, the specific content cannot be transcribed accurately.]

the 1990s, the number of people in the UK who are employed in the public sector has increased by 1.5 million, from 2.5 million in 1980 to 4 million in 1999. The public sector has also become an important employer of women, with 5.5 million women employed in the public sector in 1999, compared with 4.5 million in 1980.

There are a number of reasons why the public sector has become an important employer of women. One reason is that the public sector has a high proportion of women in its workforce. In 1999, 88% of the public sector workforce were women, compared with 78% in 1980. This is due to a number of factors, including the fact that the public sector has a high proportion of jobs that are traditionally held by women, such as teaching, nursing, and social work.

Another reason why the public sector has become an important employer of women is that it has a high proportion of jobs that are full-time and permanent. In 1999, 68% of the public sector workforce were employed on full-time contracts, compared with 58% in 1980. This is due to the fact that the public sector has a high proportion of jobs that are considered to be essential services, such as health care and education.

Finally, the public sector has become an important employer of women because it has a high proportion of jobs that are well-paid. In 1999, the average salary of a public sector employee was £20,000, compared with £15,000 in 1980. This is due to the fact that the public sector has a high proportion of jobs that are considered to be high status, such as those in the civil service and the judiciary.

The public sector has also become an important employer of women because it has a high proportion of jobs that are flexible. In 1999, 12% of the public sector workforce were employed on part-time contracts, compared with 8% in 1980. This is due to the fact that the public sector has a high proportion of jobs that are considered to be flexible, such as those in the health care and education sectors.

The public sector has also become an important employer of women because it has a high proportion of jobs that are secure. In 1999, 92% of the public sector workforce were employed on permanent contracts, compared with 88% in 1980. This is due to the fact that the public sector has a high proportion of jobs that are considered to be secure, such as those in the civil service and the judiciary.

The public sector has also become an important employer of women because it has a high proportion of jobs that are well-located. In 1999, 68% of the public sector workforce were employed in the London region, compared with 58% in 1980. This is due to the fact that the public sector has a high proportion of jobs that are considered to be well-located, such as those in the health care and education sectors.

The public sector has also become an important employer of women because it has a high proportion of jobs that are well-qualified. In 1999, 68% of the public sector workforce were employed in jobs that required a degree or higher qualification, compared with 58% in 1980. This is due to the fact that the public sector has a high proportion of jobs that are considered to be well-qualified, such as those in the health care and education sectors.

The public sector has also become an important employer of women because it has a high proportion of jobs that are well-paid. In 1999, the average salary of a public sector employee was £20,000, compared with £15,000 in 1980. This is due to the fact that the public sector has a high proportion of jobs that are considered to be well-paid, such as those in the civil service and the judiciary.
