the 1990s, the number of people in the UK who are employed in the public sector has increased by 1.5 million, from 2.5 million in 1980 to 4 million in 1995 (Department of Health 1996).

There is a growing emphasis on the need to improve the efficiency of the public sector, and to ensure that the public sector is able to deliver the services that are required by the public. This has led to a number of initiatives, including the introduction of competition, the restructuring of public sector organisations, and the introduction of performance targets.

One of the main reasons for the need to improve the efficiency of the public sector is the increasing pressure on public sector budgets. This is due to a number of factors, including the increasing cost of health care, the increasing cost of education, and the increasing cost of social services.

Another reason for the need to improve the efficiency of the public sector is the increasing demand for public services. This is due to a number of factors, including the increasing population, the increasing demand for health care, and the increasing demand for education.

There are a number of ways in which the efficiency of the public sector can be improved. These include the introduction of competition, the restructuring of public sector organisations, and the introduction of performance targets.

One of the main ways in which the efficiency of the public sector can be improved is by the introduction of competition. This can be done by allowing private companies to compete for public sector contracts, or by allowing private companies to take over public sector organisations.

Another way in which the efficiency of the public sector can be improved is by the restructuring of public sector organisations. This can be done by merging public sector organisations, or by transferring public sector functions to private companies.

A third way in which the efficiency of the public sector can be improved is by the introduction of performance targets. These targets can be used to measure the performance of public sector organisations, and to ensure that they are able to deliver the services that are required by the public.

There are a number of challenges associated with improving the efficiency of the public sector. These include the need to ensure that the public sector is able to deliver the services that are required by the public, and the need to ensure that the public sector is able to operate within its budget.

Despite these challenges, there is a growing consensus that the efficiency of the public sector must be improved. This is because the public sector is a vital part of the economy, and it is essential that it is able to deliver the services that are required by the public.

the 1990s, the incidence of *S. flexneri* has increased in the United Kingdom [10]. In the United States, *S. flexneri* has been reported as the most common serotype in children with acute bacterial dysentery [11].

There is a paucity of data on the epidemiology of *S. flexneri* in the United Kingdom. In the 1980s, *S. flexneri* was the most commonly isolated serotype from patients with acute bacterial dysentery in the United Kingdom [12]. In the 1990s, *S. flexneri* was the most commonly isolated serotype from patients with acute bacterial dysentery in the United Kingdom [13]. In the 1990s, *S. flexneri* was the most commonly isolated serotype from patients with acute bacterial dysentery in the United Kingdom [13]. In the 1990s, *S. flexneri* was the most commonly isolated serotype from patients with acute bacterial dysentery in the United Kingdom [13].

the 1990s, the number of people in the UK who are aged 65 and over has increased from 10.5 million to 13.5 million, and the number of people aged 75 and over has increased from 5.5 million to 7.5 million (Office for National Statistics 2000). The number of people aged 65 and over is projected to increase to 16.5 million by 2020, and the number of people aged 75 and over to 9.5 million (Office for National Statistics 2000).

There is a growing awareness of the need to address the needs of older people in the UK. The Department of Health (2000) has published a strategy for older people, which sets out the government's commitment to improve the lives of older people. The strategy is based on the following principles:

- Older people should be able to live independently and actively.
- Older people should be able to access the services and support they need.
- Older people should be able to participate in the decisions that affect their lives.
- Older people should be able to live in a safe and secure environment.
- Older people should be able to live in a community that respects their dignity and rights.

The strategy also sets out a number of key objectives, including:

- To improve the health and well-being of older people.
- To improve the social and economic participation of older people.
- To improve the living conditions of older people.
- To improve the protection of older people.

The strategy is a key document in the development of policy for older people in the UK. It provides a framework for the development of legislation, policy, and practice. It also provides a basis for the evaluation of the effectiveness of services and support for older people.

[The following text is a dense, continuous block of characters and symbols, likely representing a corrupted or redacted document. It contains no legible words or phrases.]

the 1990s, the number of people in the world who are under 15 years of age has increased from 1.1 billion to 1.5 billion, and the number of people aged 65 and over has increased from 0.4 billion to 0.6 billion (United Nations, 1999).

There are a number of reasons why the world's population is ageing. First, the number of people who survive to old age has increased. In 1950, the life expectancy at birth was 47 years for men and 51 years for women. By 1995, life expectancy at birth had increased to 71 years for men and 76 years for women (United Nations, 1999). This increase in life expectancy is due to a number of factors, including improvements in medical care, better nutrition, and a reduction in the number of people who die from infectious diseases.

Second, the number of people who are aged 65 and over has increased. In 1950, there were 0.4 billion people aged 65 and over in the world. By 1995, there were 0.6 billion people aged 65 and over in the world (United Nations, 1999). This increase in the number of people aged 65 and over is due to a number of factors, including improvements in medical care, better nutrition, and a reduction in the number of people who die from infectious diseases.

Third, the number of people who are aged 15 and under has increased. In 1950, there were 1.1 billion people aged 15 and under in the world. By 1995, there were 1.5 billion people aged 15 and under in the world (United Nations, 1999). This increase in the number of people aged 15 and under is due to a number of factors, including improvements in medical care, better nutrition, and a reduction in the number of people who die from infectious diseases.

The world's population is ageing, and this is a major challenge for the world's governments. The number of people who are aged 65 and over is increasing, and this is putting a strain on the world's social security systems. The number of people who are aged 15 and under is also increasing, and this is putting a strain on the world's education systems.
