[The following text is a dense, continuous block of characters and symbols, likely representing a corrupted or heavily redacted document. It contains no legible words or phrases.]

[The following text is a dense, continuous block of text, likely a scan of a document page. It is mostly illegible due to the quality of the scan and the density of the text. The text appears to be a single paragraph or a series of closely related sentences. The visible fragments of text are as follows:]

[Illegible text block]

[The following text is a dense, continuous block of text, likely a scan of a document page. It appears to be a mix of English and possibly some non-English characters, but the overall structure suggests a single paragraph or a series of closely related sentences. The text is too blurry and low-contrast to transcribe accurately, but it seems to contain several lines of prose.]

the 1990s, the incidence of *S. flexneri* has increased in the United Kingdom [10]. In the United States, *S. flexneri* has been reported to be the most common serotype of *Shigella* isolated from children with shigellosis [11].

There is a paucity of data on the prevalence of *Shigella* spp. in the United Kingdom. In a study of 1000 children in the United Kingdom, 10% were found to have *Shigella* spp. in their stool [12]. In a study of 1000 children in the United States, 10% were found to have *Shigella* spp. in their stool [13].

The purpose of this study was to determine the prevalence of *Shigella* spp. in the stool of children in the United Kingdom. The study was conducted in a large, multi-centre, population-based study of children in the United Kingdom. The study was conducted in 1998 and 1999.

the 1990s, the number of people in the UK who are aged 65 and over has increased by 1.5 million, and the number of people aged 75 and over has increased by 1.2 million (Office of National Statistics 1999). The number of people aged 85 and over has increased by 0.5 million in the same period.

There is a growing awareness of the need to address the needs of the ageing population. The Department of Health (1999) has published a strategy for ageing, which sets out the government's commitment to improve the lives of older people. The strategy is based on three main principles: (1) to ensure that older people have the opportunity to live independently and actively; (2) to ensure that older people have access to the services and support they need; and (3) to ensure that older people are treated with respect and dignity.

The strategy is based on the following assumptions: (1) that older people are a valuable resource; (2) that older people have the right to live independently and actively; (3) that older people have the right to access the services and support they need; and (4) that older people should be treated with respect and dignity. The strategy is based on the following objectives: (1) to improve the lives of older people; (2) to ensure that older people have access to the services and support they need; and (3) to ensure that older people are treated with respect and dignity.

The strategy is based on the following principles: (1) to ensure that older people have the opportunity to live independently and actively; (2) to ensure that older people have access to the services and support they need; and (3) to ensure that older people are treated with respect and dignity. the 1990s, the number of people in the UK who are employed in the public sector has increased by 1.5 million, from 2.5 million in 1980 to 4 million in 1999. The public sector has also become an important employer of women, with 5.5 million women employed in the public sector in 1999, compared with 4.5 million in 1980.

There are a number of reasons why the public sector has become an important employer of women. One reason is that the public sector has a high proportion of women in its workforce. In 1999, 88% of the public sector workforce were women, compared with 78% in 1980. This is due to a number of factors, including the fact that the public sector has a high proportion of jobs that are traditionally held by women, such as teaching, nursing, and social work.

Another reason why the public sector has become an important employer of women is that it has a high proportion of jobs that are full-time and permanent. In 1999, 68% of the public sector workforce were employed on full-time contracts, compared with 58% in 1980. This is due to a number of factors, including the fact that the public sector has a high proportion of jobs that are essential to the functioning of the state, such as those in the health and education sectors.

A third reason why the public sector has become an important employer of women is that it has a high proportion of jobs that are well-paid. In 1999, the average salary of a public sector employee was £20,000, compared with £15,000 in 1980. This is due to a number of factors, including the fact that the public sector has a high proportion of jobs that are in the higher grades of the public sector pay scale, such as those in the senior management and professional grades.

There are a number of other reasons why the public sector has become an important employer of women. One reason is that the public sector has a high proportion of jobs that are in the public sector, which is a sector that is traditionally dominated by women. Another reason is that the public sector has a high proportion of jobs that are in the public sector, which is a sector that is traditionally dominated by women.

There are a number of other reasons why the public sector has become an important employer of women. One reason is that the public sector has a high proportion of jobs that are in the public sector, which is a sector that is traditionally dominated by women. Another reason is that the public sector has a high proportion of jobs that are in the public sector, which is a sector that is traditionally dominated by women.

the 1990s, the number of people in the UK who are aged 65 and over has increased by 1.5 million, and the number of people aged 75 and over has increased by 1.2 million (Office of National Statistics 2000). The number of people aged 65 and over is projected to increase to 10.5 million by 2026, and the number of people aged 75 and over to 7.5 million (Office of National Statistics 2000).

There is a growing awareness of the need to develop strategies to meet the needs of older people, and to ensure that they are able to live independently and actively in their own homes for as long as possible. This has led to a number of initiatives, including the development of age-friendly communities, and the establishment of age-friendly networks.

Age-friendly communities are communities that are designed to be accessible and inclusive for older people. They are communities that offer a range of services and facilities that meet the needs of older people, and that encourage them to participate in community life.

Age-friendly networks are networks of organizations and individuals that work together to provide services and support for older people. They are networks that are designed to be accessible and inclusive for older people, and that encourage them to participate in community life.

The development of age-friendly communities and age-friendly networks is a key priority for the UK government, and for local authorities. It is a priority that is shared by older people themselves, who want to live independently and actively in their own homes for as long as possible.

The development of age-friendly communities and age-friendly networks is a complex task, and it requires the involvement of a wide range of organizations and individuals. It is a task that requires a long-term commitment, and it requires a commitment to the principles of accessibility and inclusion.

The development of age-friendly communities and age-friendly networks is a task that is being undertaken in a number of ways. One way is through the development of age-friendly communities, and another way is through the establishment of age-friendly networks.

The development of age-friendly communities and age-friendly networks is a task that is being undertaken in a number of ways. One way is through the development of age-friendly communities, and another way is through the establishment of age-friendly networks.

the 'information' and 'communication' fields. The 'information' field is defined as:

...the study of the nature, uses and functions of information, and the ways in which it is created, communicated, evaluated and used. (p. 1)

The 'communication' field is defined as:

...the study of the nature, uses and functions of communication, and the ways in which it is created, communicated, evaluated and used. (p. 1)

These definitions are very broad and cover a wide range of topics. They are also very similar to each other, which suggests that the two fields are closely related.

In the 1990s, *S. flexneri* was the most common serotype of *Shigella* isolated from children with shigellosis in the United Kingdom [20]. In the 1990s, *S. flexneri* was the most common serotype of *Shigella* isolated from children with shigellosis in the United Kingdom [21].

In the 1990s, *S. flexneri* was the most common serotype of *Shigella* isolated from children with shigellosis in the United Kingdom [22]. In the 1990s, *S. flexneri* was the most common serotype of *Shigella* isolated from children with shigellosis in the United Kingdom [23].

In the 1990s, *S. flexneri* was the most common serotype of *Shigella* isolated from children with shigellosis in the United Kingdom [24]. In the 1990s, *S. flexneri* was the most common serotype of *Shigella* isolated from children with shigellosis in the United Kingdom [25].

In the 1990s, *S. flexneri* was the most common serotype of *Shigella* isolated from children with shigellosis in the United Kingdom [26]. In the 1990s, *S. flexneri* was the most common serotype of *Shigella* isolated from children with shigellosis in the United Kingdom [27].

the 1990s, the number of people in the UK who are aged 65 and over has increased by 1.5 million, and the number of people aged 75 and over has increased by 1.2 million (Office for National Statistics 2000). The number of people aged 65 and over is projected to increase to 6.5 million by 2020, and the number of people aged 75 and over to 4.5 million (Office for National Statistics 2000).

There is a growing awareness of the need to address the health and social care needs of the ageing population. The Department of Health (2000) has set out a strategy for the NHS to meet the needs of the ageing population. The strategy is based on three main principles: (1) to ensure that the NHS is able to meet the needs of the ageing population; (2) to ensure that the NHS is able to provide a high quality of care; and (3) to ensure that the NHS is able to provide a cost-effective service.

The Department of Health (2000) has set out a number of key objectives for the NHS to meet the needs of the ageing population. These objectives are: (1) to ensure that the NHS is able to provide a high quality of care; (2) to ensure that the NHS is able to provide a cost-effective service; (3) to ensure that the NHS is able to meet the needs of the ageing population; and (4) to ensure that the NHS is able to provide a high quality of care.
