the 1990s, the number of people in the UK who are aged 65 and over has increased by 1.5 million, and the number of people aged 75 and over has increased by 1 million (Office for National Statistics 1999). The number of people aged 65 and over is projected to increase to 6.5 million by 2011, and the number of people aged 75 and over to 3.5 million (Office for National Statistics 1999).

There is a growing awareness of the need to address the health and social care needs of the ageing population. The Department of Health (1999) has identified the need to develop a new approach to health and social care for the ageing population. This approach should be based on the principles of 'active ageing', which is defined as the process of optimising the opportunities for people to lead healthy, active and productive lives. The Department of Health (1999) has identified a number of key areas for action in order to achieve this goal, including: improving the health and social care system; promoting healthy living; and supporting the social and economic participation of older people.

The Department of Health (1999) has also identified a number of key areas for action in order to improve the health and social care system. These include: improving the quality of care; increasing the efficiency of the system; and ensuring that the system is sustainable. The Department of Health (1999) has also identified a number of key areas for action in order to promote healthy living. These include: encouraging people to take responsibility for their own health; promoting healthy eating and exercise; and encouraging people to stop smoking and drinking alcohol.

The Department of Health (1999) has also identified a number of key areas for action in order to support the social and economic participation of older people. These include: encouraging older people to participate in social and economic activities; supporting older people to live independently; and ensuring that older people have access to the services and facilities they need. The Department of Health (1999) has also identified a number of key areas for action in order to ensure that the health and social care system is sustainable. These include: ensuring that the system is financially sustainable; ensuring that the system is environmentally sustainable; and ensuring that the system is socially sustainable.

the 1990s, the incidence of *S. flexneri* has increased in the United Kingdom [10]. In the United States, *S. flexneri* has been reported as the most common serotype in children with acute bacterial dysentery [11].

There is a paucity of data on the epidemiology of *S. flexneri* in the United Kingdom. In the 1970s, *S. flexneri* was the most commonly isolated serotype from patients with acute bacterial dysentery in the United Kingdom [12]. In the 1980s, *S. flexneri* was the most commonly isolated serotype from patients with acute bacterial dysentery in the United Kingdom [13]. In the 1990s, *S. flexneri* was the most commonly isolated serotype from patients with acute bacterial dysentery in the United Kingdom [14].

The purpose of this study was to determine the prevalence of *S. flexneri* in the United Kingdom. The study was designed to determine the prevalence of *S. flexneri* in the United Kingdom. The study was designed to determine the prevalence of *S. flexneri* in the United Kingdom. The study was designed to determine the prevalence of *S. flexneri* in the United Kingdom.
