the 1990s, the number of people in the United States who are obese has increased by 100% (Flegal et al. 2002). In the United Kingdom, the prevalence of obesity has increased from 10% in 1980 to 15% in 1997 (Health Survey for England 1997). In the United States, the prevalence of obesity has increased from 15% in 1980 to 23% in 1994 (Flegal et al. 2002).

Obesity is a complex condition, with many causes and consequences. It is a leading cause of death and disability in the United States, and a major public health problem in many other countries. Obesity is associated with a number of health problems, including heart disease, diabetes, and certain types of cancer. It is also associated with social and psychological problems, such as discrimination and low self-esteem.

There are many factors that contribute to obesity, including genetics, diet, and physical activity. In the United States, the prevalence of obesity has increased significantly in the past few decades, and this is largely due to changes in diet and physical activity. In the United Kingdom, the prevalence of obesity has also increased, but at a slower rate than in the United States.

There are many reasons why obesity is a complex condition. It is a leading cause of death and disability in the United States, and a major public health problem in many other countries. Obesity is associated with a number of health problems, including heart disease, diabetes, and certain types of cancer. It is also associated with social and psychological problems, such as discrimination and low self-esteem.

the 1990s, the number of people in the UK who are employed in the public sector has increased by 1.5 million (from 2.5 million in 1980 to 4 million in 1998) and the number of people in the public sector who are employed in the health sector has increased by 1.2 million (from 1.3 million in 1980 to 2.5 million in 1998).

There are a number of reasons why the public sector has grown so rapidly. One of the main reasons is that the government has increased its spending on the public sector. In 1980, the government spent £10 billion on the public sector, but by 1998, this had increased to £40 billion. This increase in spending has been due to a number of factors, including the fact that the government has increased its spending on health care, education, and social services.

Another reason why the public sector has grown so rapidly is that the private sector has not been able to provide enough services to meet the needs of the population. For example, in the health sector, the private sector has not been able to provide enough hospital beds, and in the education sector, the private sector has not been able to provide enough schools. This has led to the government having to step in and provide these services itself.

A third reason why the public sector has grown so rapidly is that the government has increased its control over the public sector. In 1980, the government had a 50% share in the public sector, but by 1998, this had increased to 80%. This increase in government control has been due to a number of factors, including the fact that the government has increased its control over the public sector's finances, and it has increased its control over the public sector's personnel.

There are a number of reasons why the public sector has grown so rapidly. One of the main reasons is that the government has increased its spending on the public sector.
