the 1990s, the number of people in the UK who are aged 65 and over has increased by 1.5 million (1990–1999) and is projected to increase by a further 1.5 million by 2010 (Office for National Statistics, 2000). The number of people aged 65 and over is projected to increase by 2.5 million by 2020 (Office for National Statistics, 2000).

There is a growing awareness of the need to develop strategies to meet the needs of the ageing population. The Department of Health (1999) has published a strategy for ageing, which sets out the government's commitment to improve the health and quality of life of older people. The strategy is based on three main principles: (1) to ensure that older people have access to the services they need; (2) to ensure that older people are able to live independently; and (3) to ensure that older people are able to participate in the activities of their communities.

The strategy is based on three main principles: (1) to ensure that older people have access to the services they need; (2) to ensure that older people are able to live independently; and (3) to ensure that older people are able to participate in the activities of their communities. [Illegible text block]

[REDACTED]

[The following text is a dense, continuous block of text, likely a scan of a document page. It is mostly illegible due to extreme blurring and low contrast. The text appears to be a single paragraph or a series of lines of prose, but the specific words and sentences cannot be transcribed accurately.]

the 1990s, the number of people in the world who are under 15 years of age has increased by 1.2 billion, from 1.1 billion in 1980 to 2.3 billion in 1999. The number of people aged 15 years and over has increased by 1.1 billion, from 1.1 billion in 1980 to 2.2 billion in 1999.

There are a number of reasons why the world population is growing so rapidly. One of the main reasons is that the number of children born to each woman has increased. In 1980, the average woman in the world had 2.5 children. In 1999, the average woman in the world had 2.7 children.

Another reason why the world population is growing so rapidly is that the number of people who are surviving to old age has increased. In 1980, the average person in the world lived for 55 years. In 1999, the average person in the world lived for 65 years.

There are a number of reasons why the number of people who are surviving to old age has increased. One of the main reasons is that the number of people who are dying from infectious diseases has decreased. In 1980, 10 million people died from infectious diseases. In 1999, 5 million people died from infectious diseases.

Another reason why the number of people who are surviving to old age has increased is that the number of people who are dying from non-infectious diseases has decreased. In 1980, 10 million people died from non-infectious diseases. In 1999, 5 million people died from non-infectious diseases.

There are a number of reasons why the number of people who are dying from non-infectious diseases has decreased. One of the main reasons is that the number of people who are smoking has decreased. In 1980, 1 billion people smoked. In 1999, 0.5 billion people smoked.

Another reason why the number of people who are dying from non-infectious diseases has decreased is that the number of people who are eating a healthy diet has increased. In 1980, 1 billion people ate a healthy diet. In 1999, 1.5 billion people ate a healthy diet.

There are a number of reasons why the number of people who are eating a healthy diet has increased. One of the main reasons is that the number of people who are eating more fruits and vegetables has increased. In 1980, 1 billion people ate more fruits and vegetables. In 1999, 1.5 billion people ate more fruits and vegetables.

Another reason why the number of people who are eating a healthy diet has increased is that the number of people who are eating less fat and sugar has increased. In 1980, 1 billion people ate less fat and sugar. In 1999, 1.5 billion people ate less fat and sugar.

There are a number of reasons why the number of people who are eating less fat and sugar has increased. One of the main reasons is that the number of people who are eating more whole grains has increased. In 1980, 1 billion people ate more whole grains. In 1999, 1.5 billion people ate more whole grains.

Another reason why the number of people who are eating less fat and sugar has increased is that the number of people who are eating less meat has increased. In 1980, 1 billion people ate less meat. In 1999, 1.5 billion people ate less meat.

There are a number of reasons why the number of people who are eating less meat has increased. One of the main reasons is that the number of people who are eating more plant-based proteins has increased. In 1980, 1 billion people ate more plant-based proteins. In 1999, 1.5 billion people ate more plant-based proteins.

the 1990s, the number of people in the UK who are employed in the public sector has increased by 1.5 million (from 2.5 million in 1980 to 4 million in 1999). The public sector has become a major employer in the UK, and this has implications for the way in which the public sector is managed and the way in which it is funded.

The public sector is a complex organisation, and it is difficult to understand how it works. This paper aims to provide a brief overview of the public sector in the UK, and to discuss the challenges that it faces. The paper is divided into three main sections: the first section describes the public sector in the UK, the second section discusses the challenges that the public sector faces, and the third section discusses the ways in which the public sector can be improved.
