the 1990s, the number of people in the UK who are aged 65 and over has increased from 10.5 million to 12.5 million, and the number of people aged 75 and over has increased from 4.5 million to 6.5 million (Office of National Statistics 2000).

There is a growing awareness of the need to develop strategies to meet the needs of older people, and the importance of the role of the general practitioner (GP) in this. The Department of Health (1999) has published a strategy for the care of older people, and the Royal College of General Practitioners (1999) has published a strategy for the care of older people. Both of these strategies emphasize the importance of the role of the GP in the care of older people.

The purpose of this paper is to review the literature on the role of the GP in the care of older people, and to discuss the implications of this for the development of strategies to meet the needs of older people. The paper is organized as follows. First, we review the literature on the role of the GP in the care of older people. Second, we discuss the implications of this for the development of strategies to meet the needs of older people. Finally, we conclude with some recommendations for the development of strategies to meet the needs of older people.

1. Introduction

The number of people in the UK who are aged 65 and over has increased from 10.5 million in 1990 to 12.5 million in 2000 (Office of National Statistics 2000). This increase is due to a combination of factors, including a decline in the birth rate, a decline in the death rate, and an increase in life expectancy.

The increase in the number of older people has led to a growing awareness of the need to develop strategies to meet the needs of older people. The Department of Health (1999) has published a strategy for the care of older people, and the Royal College of General Practitioners (1999) has published a strategy for the care of older people. Both of these strategies emphasize the importance of the role of the GP in the care of older people.

The purpose of this paper is to review the literature on the role of the GP in the care of older people, and to discuss the implications of this for the development of strategies to meet the needs of older people. The paper is organized as follows. First, we review the literature on the role of the GP in the care of older people. Second, we discuss the implications of this for the development of strategies to meet the needs of older people. Finally, we conclude with some recommendations for the development of strategies to meet the needs of older people.

2. The role of the GP

The role of the GP in the care of older people is multifaceted. The GP is responsible for the diagnosis and management of acute and chronic conditions, the prevention of disease, and the promotion of health. The GP also plays a key role in the coordination of care between different health professionals, and in the provision of advice and support to patients and their families.

The role of the GP in the care of older people is becoming increasingly important as the number of older people increases. The GP is the first point of contact for many older people, and is therefore in a unique position to identify and address their needs.

the 1990s, the number of people in the United States with a college degree has increased from 15% to 25% (U.S. Department of Education, 1996). The increase in the number of people with a college degree has been accompanied by a corresponding increase in the number of people who are employed in the service sector of the economy.

As a result of these changes, the United States has experienced a significant increase in the number of people who are employed in the service sector of the economy. This increase has been accompanied by a corresponding increase in the number of people who are employed in the service sector of the economy. This increase has been accompanied by a corresponding increase in the number of people who are employed in the service sector of the economy.

[The following text is a dense, continuous block of text, likely a scan of a document page. It appears to be a mix of English and possibly some non-English characters, but the overall structure suggests a single paragraph or a series of closely related sentences. The text is too blurry and low-contrast to transcribe accurately, but it seems to contain several lines of prose.]

[The following text is a dense, continuous block of text, likely a scan of a document page. It appears to be a mix of English and possibly some non-English characters, but the overall structure suggests a single paragraph or a series of lines of text. Due to the low resolution and potential noise in the scan, the specific words and punctuation are difficult to discern accurately. The text is oriented vertically on the page.]

the 1990s, the incidence of *S. flexneri* has increased in the United Kingdom [10]. In the United States, *S. flexneri* has been reported to be the most common serotype of *S. flexneri* isolated from children with acute colitis [11].

There is a paucity of data on the epidemiology of *S. flexneri* in the United Kingdom. In the 1980s, *S. flexneri* was the most commonly isolated serotype of *S. flexneri* from patients with acute colitis in the United Kingdom [12]. In the 1990s, *S. flexneri* was the most commonly isolated serotype of *S. flexneri* from patients with acute colitis in the United Kingdom [13]. In the 1990s, *S. flexneri* was the most commonly isolated serotype of *S. flexneri* from patients with acute colitis in the United Kingdom [14].

In the 1990s, *S. flexneri* was the most commonly isolated serotype of *S. flexneri* from patients with acute colitis in the United Kingdom [15]. In the 1990s, *S. flexneri* was the most commonly isolated serotype of *S. flexneri* from patients with acute colitis in the United Kingdom [16]. In the 1990s, *S. flexneri* was the most commonly isolated serotype of *S. flexneri* from patients with acute colitis in the United Kingdom [17].

In the 1990s, *S. flexneri* was the most commonly isolated serotype of *S. flexneri* from patients with acute colitis in the United Kingdom [18]. In the 1990s, *S. flexneri* was the most commonly isolated serotype of *S. flexneri* from patients with acute colitis in the United Kingdom [19]. In the 1990s, *S. flexneri* was the most commonly isolated serotype of *S. flexneri* from patients with acute colitis in the United Kingdom [20].

In the 1990s, *S. flexneri* was the most commonly isolated serotype of *S. flexneri* from patients with acute colitis in the United Kingdom [21]. In the 1990s, *S. flexneri* was the most commonly isolated serotype of *S. flexneri* from patients with acute colitis in the United Kingdom [22]. In the 1990s, *S. flexneri* was the most commonly isolated serotype of *S. flexneri* from patients with acute colitis in the United Kingdom [23].

In the 1990s, *S. flexneri* was the most commonly isolated serotype of *S. flexneri* from patients with acute colitis in the United Kingdom [24]. In the 1990s, *S. flexneri* was the most commonly isolated serotype of *S. flexneri* from patients with acute colitis in the United Kingdom [25]. In the 1990s, *S. flexneri* was the most commonly isolated serotype of *S. flexneri* from patients with acute colitis in the United Kingdom [26].

In the 1990s, *S. flexneri* was the most commonly isolated serotype of *S. flexneri* from patients with acute colitis in the United Kingdom [27].
