The text appears to be a single paragraph or a series of closely related sentences, but the specific words and structure cannot be discerned.]

the 1990s, the number of people in the world who are under 15 years of age has increased from 1.1 billion to 1.5 billion. The number of people aged 65 and over has increased from 200 million to 350 million. The number of people aged 15–64 years has increased from 1.5 billion to 2.0 billion.

There are a number of factors which have contributed to this increase in the number of people in the world. One of the main factors is the increase in life expectancy. In 1990, the average life expectancy at birth was 47 years. In 2000, it was 52 years. This increase in life expectancy has led to a larger proportion of the population being aged 65 and over.

Another factor which has contributed to the increase in the number of people in the world is the increase in the number of people who are aged 15–64 years. This increase is due to a number of factors, including the increase in the number of people who are aged 15–24 years, and the increase in the number of people who are aged 25–64 years.

The increase in the number of people in the world has led to a number of challenges. One of the main challenges is the need for more resources to support the growing population. This includes the need for more food, water, and shelter. It also includes the need for more education and healthcare.

Another challenge is the need for more jobs. As the population grows, there will be a need for more people to work. This will require the creation of more jobs, which will be a challenge for many countries.

The increase in the number of people in the world is a complex issue. It is a result of a number of factors, and it will have a number of challenges. It is important that we understand the factors which have contributed to this increase, and that we develop strategies to address the challenges which it presents.

One of the main challenges is the need for more resources to support the growing population. This includes the need for more food, water, and shelter. It also includes the need for more education and healthcare.

Another challenge is the need for more jobs. As the population grows, there will be a need for more people to work. This will require the creation of more jobs, which will be a challenge for many countries.

the 1990s, the number of people in the UK who are employed in the public sector has increased by 1.5 million, from 2.5 million in 1980 to 4 million in 1995. The public sector has also become an important employer of women, with 1.5 million women employed in the public sector in 1995, compared with 1.2 million in 1980.

There are a number of reasons why the public sector has become an important employer of women. One reason is that the public sector has become an important provider of social services, such as child care, education, and health care. These services are often provided by women, and this has led to an increase in the number of women employed in the public sector.

Another reason is that the public sector has become an important employer of women because it provides a stable and secure environment for women. The public sector is often seen as a more secure employer than the private sector, and this has led to an increase in the number of women employed in the public sector.

There are also a number of reasons why the public sector has become an important employer of women because it provides a stable and secure environment for women. The public sector is often seen as a more secure employer than the private sector, and this has led to an increase in the number of women employed in the public sector.

the 1990s, the number of people in the UK who are aged 65 and over has increased from 10.5 million to 12.5 million, and the number of people aged 75 and over has increased from 4.5 million to 6.5 million (Office of National Statistics 2000).

There is a growing awareness of the need to address the needs of older people in the community. The Department of Health (1999) has published a strategy for older people, which sets out a vision for the future of older people's health and care. The strategy is based on the following principles: older people should be able to live independently and actively; older people should be able to access the services they need; and older people should be able to participate in decisions about their care and services.

The strategy also sets out a number of key objectives for the future of older people's health and care. These include: to improve the health and well-being of older people; to ensure that older people have access to the services they need; to ensure that older people are able to participate in decisions about their care and services; and to ensure that older people are able to live independently and actively.

The strategy is a key document for the future of older people's health and care in the UK. It sets out a vision for the future of older people's health and care, and sets out a number of key objectives for the future of older people's health and care. [REDACTED]

the 1990s, the incidence of *S. flexneri* infections has increased in the United Kingdom [10]. In the United States, *S. flexneri* has been reported as the most common serotype of *Shigella* isolated from children with shigellosis [11].

There is a paucity of data on the epidemiology of *S. flexneri* in the United Kingdom. In the 1980s, *S. flexneri* was the most commonly isolated *Shigella* serotype from patients with shigellosis in the United Kingdom [12]. In the 1990s, *S. flexneri* was the most commonly isolated *Shigella* serotype from patients with shigellosis in the United Kingdom [13].

In the United States, *S. flexneri* has been reported as the most common serotype of *Shigella* isolated from children with shigellosis [11].
