the 1990s, the incidence of *S. flexneri* has increased in the United Kingdom [10]. In the United States, *S. flexneri* has been reported as the most common serotype in children with acute bacterial dysentery [11].

There is a paucity of data on the epidemiology of *S. flexneri* in the United Kingdom. In the 1980s, *S. flexneri* was the most commonly isolated serotype from patients with acute bacterial dysentery in the United Kingdom [12]. In the 1990s, *S. flexneri* was the most commonly isolated serotype from patients with acute bacterial dysentery in the United Kingdom [13].

The purpose of this study was to determine the prevalence of *S. flexneri* in the United Kingdom. The study was designed to determine the prevalence of *S. flexneri* in the United Kingdom. The study was designed to determine the prevalence of *S. flexneri* in the United Kingdom.

[Illegible text block]

the 1990s, the number of people in the UK who are aged 65 and over has increased by 1.5 million, and the number of people aged 75 and over has increased by 1.2 million (Office of National Statistics 2000). The number of people aged 65 and over is projected to increase to 10.5 million by 2026, and the number of people aged 75 and over to 7.5 million (Office of National Statistics 2000).

There is a growing awareness of the need to develop strategies to meet the needs of the ageing population. The Department of Health (1999) has identified the need to develop a 'new paradigm' for the care of the elderly, one that is based on the principles of 'active ageing'. This paradigm is based on the idea that ageing is a process, and that the needs of the elderly are not static. It is therefore necessary to develop strategies that can respond to the changing needs of the elderly over time.

The 'new paradigm' for the care of the elderly is based on the principles of 'active ageing'. This paradigm is based on the idea that ageing is a process, and that the needs of the elderly are not static. It is therefore necessary to develop strategies that can respond to the changing needs of the elderly over time. The 'new paradigm' is based on the following principles:

- The elderly are not a homogeneous group, and their needs vary widely.
- The needs of the elderly are not static, and they change over time.
- The elderly have the right to participate in decisions about their care.
- The elderly have the right to live in their own homes, wherever possible.
- The elderly have the right to access a range of services that can help them to live well.

The 'new paradigm' for the care of the elderly is based on the principles of 'active ageing'. This paradigm is based on the idea that ageing is a process, and that the needs of the elderly are not static. It is therefore necessary to develop strategies that can respond to the changing needs of the elderly over time.

[REDACTED]

the 1990s, the number of people in the UK who are employed in the public sector has increased by 1.5 million (1990–1999) and the number of people in the public sector has increased by 2.5 million (1990–1999) (Department of Health 2000).

There is a growing emphasis on the need to improve the efficiency of the public sector. The Department of Health (2000) has set out a number of targets for the public sector, including a 10% reduction in the number of people employed in the public sector by 2005. This has led to a number of initiatives to improve the efficiency of the public sector, including the introduction of the 'New Deal' for the public sector (Department of Health 2000).

The 'New Deal' for the public sector is a set of initiatives designed to improve the efficiency of the public sector. It includes a number of measures, such as the introduction of performance-related pay, the introduction of a 'New Deal' for the public sector, and the introduction of a 'New Deal' for the public sector. The 'New Deal' for the public sector is a set of initiatives designed to improve the efficiency of the public sector.

The number of people aged 65 and over is projected to increase to 6.5 million by 2010, and the number of people aged 75 and over to 4.5 million (Office of National Statistics 2000).

There is a growing awareness of the need to address the health and social care needs of older people. The Department of Health (2000) has set out a strategy for the NHS to meet the needs of older people. The strategy is based on the following principles: (1) to ensure that older people have access to the services they need; (2) to ensure that older people are treated with respect and dignity; (3) to ensure that older people are able to live independently; and (4) to ensure that older people are able to participate in the decisions that affect their lives.

The Department of Health (2000) has also set out a number of key objectives for the NHS to meet the needs of older people. These objectives are: (1) to improve the health of older people; (2) to improve the social care of older people; (3) to improve the housing of older people; and (4) to improve the transport of older people. The Department of Health (2000) has also set out a number of key actions for the NHS to meet the needs of older people. These actions are: (1) to improve the health of older people; (2) to improve the social care of older people; (3) to improve the housing of older people; and (4) to improve the transport of older people.
