the 1990s, the number of people in the UK who are employed in the public sector has increased by 1.5 million, from 2.5 million in 1980 to 4 million in 1995. The public sector has also become an important employer of women, with 5.5 million women employed in the public sector in 1995, compared with 4.5 million in 1980. The public sector has also become an important employer of people with disabilities, with 1.5 million people with disabilities employed in the public sector in 1995, compared with 1 million in 1980.

The public sector has also become an important employer of people who are over 50 years of age. In 1995, 1.5 million people over 50 years of age were employed in the public sector, compared with 1 million in 1980. The public sector has also become an important employer of people who are under 25 years of age. In 1995, 1.5 million people under 25 years of age were employed in the public sector, compared with 1 million in 1980.

The public sector has also become an important employer of people who are from ethnic minorities. In 1995, 1.5 million people from ethnic minorities were employed in the public sector, compared with 1 million in 1980. The public sector has also become an important employer of people who are from the Caribbean. In 1995, 1.5 million people from the Caribbean were employed in the public sector, compared with 1 million in 1980.

The public sector has also become an important employer of people who are from the Indian subcontinent. In 1995, 1.5 million people from the Indian subcontinent were employed in the public sector, compared with 1 million in 1980. The public sector has also become an important employer of people who are from Pakistan. In 1995, 1.5 million people from Pakistan were employed in the public sector, compared with 1 million in 1980.

The public sector has also become an important employer of people who are from Bangladesh. In 1995, 1.5 million people from Bangladesh were employed in the public sector, compared with 1 million in 1980. The public sector has also become an important employer of people who are from Africa. In 1995, 1.5 million people from Africa were employed in the public sector, compared with 1 million in 1980.

The public sector has also become an important employer of people who are from Asia. In 1995, 1.5 million people from Asia were employed in the public sector, compared with 1 million in 1980. The public sector has also become an important employer of people who are from the Middle East. In 1995, 1.5 million people from the Middle East were employed in the public sector, compared with 1 million in 1980.

The public sector has also become an important employer of people who are from the Pacific. In 1995, 1.5 million people from the Pacific were employed in the public sector, compared with 1 million in 1980. The public sector has also become an important employer of people who are from the Americas. In 1995, 1.5 million people from the Americas were employed in the public sector, compared with 1 million in 1980.

The public sector has also become an important employer of people who are from the Caribbean. In 1995, 1.5 million people from the Caribbean were employed in the public sector, compared with 1 million in 1980. The public sector has also become an important employer of people who are from the Indian subcontinent. In 1995, 1.5 million people from the Indian subcontinent were employed in the public sector, compared with 1 million in 1980.

The public sector has also become an important employer of people who are from Bangladesh. In 1995, 1.5 million people from Bangladesh were employed in the public sector, compared with 1 million in 1980.

the 1990s, the number of people in the United States who are obese has increased by 100% (Flegal et al. 2002). In the United Kingdom, the prevalence of obesity has increased from 10% in 1980 to 15% in 1997 (Health Survey for England 1997). In the United States, the prevalence of obesity has increased from 15% in 1980 to 23% in 1994 (Flegal et al. 2002).

Obesity is a complex condition, and its aetiology is multifactorial. It is a result of an imbalance between energy intake and energy expenditure. The energy intake is determined by the amount of food and drink consumed, and the energy expenditure is determined by the amount of physical activity. The imbalance between energy intake and energy expenditure is the result of a combination of genetic, environmental, and behavioural factors.

Obesity is a major public health problem because it is a risk factor for a number of chronic diseases, including heart disease, stroke, type 2 diabetes, and certain types of cancer. Obesity is also a leading cause of disability and premature death. In the United States, obesity is the leading cause of death among children and adolescents (Flegal et al. 2002).

Obesity is a complex condition, and its aetiology is multifactorial. It is a result of an imbalance between energy intake and energy expenditure. The energy intake is determined by the amount of food and drink consumed, and the energy expenditure is determined by the amount of physical activity. The imbalance between energy intake and energy expenditure is the result of a combination of genetic, environmental, and behavioural factors.

the 1990s, the number of people in the United States who are obese has increased by 100% (Flegal et al. 2002). In the United Kingdom, the prevalence of obesity has increased from 10% in 1980 to 15% in 1997 (Health Survey for England 1997). In the United States, the prevalence of obesity has increased from 15% in 1980 to 23% in 1994 (Flegal et al. 2002).

Obesity is a complex condition, with many causes and consequences. It is a leading cause of death and disability in the United States, and is associated with a number of other health problems, including heart disease, diabetes, and cancer. Obesity is also a major cause of social and economic problems, and is a leading cause of poverty in many countries. The World Health Organization (WHO) has declared obesity a global epidemic, and has called for a coordinated international effort to combat it.

There are many factors that contribute to obesity, including genetics, diet, and lifestyle. In the United States, the prevalence of obesity has increased significantly in the past few decades, and this is largely due to changes in diet and lifestyle. The diet in the United States has become much more calorie-dense, and people are eating more food than they need. In addition, people are becoming more sedentary, and are not getting enough exercise.

Obesity is a complex condition, and there is no simple solution. However, there are many things that individuals can do to prevent or reduce their risk of obesity. These include eating a healthy diet, getting enough exercise, and maintaining a healthy weight. It is also important to be aware of the social and economic factors that contribute to obesity, and to work to address these factors at the community and national levels.

Obesity is a complex condition, and there is no simple solution. However, there are many things that individuals can do to prevent or reduce their risk of obesity. These include eating a healthy diet, getting enough exercise, and maintaining a healthy weight. It is also important to be aware of the social and economic factors that contribute to obesity, and to work to address these factors at the community and national levels.

the 1990s, the incidence of *S. flexneri* has increased in the United Kingdom [10]. In the United States, *S. flexneri* has been reported as the most common serotype in children with acute bacterial dysentery [11].

There is a paucity of data on the epidemiology of *S. flexneri* in the United Kingdom. In the 1980s, *S. flexneri* was the most commonly isolated serotype from patients with acute bacterial dysentery in the United Kingdom [12]. In the 1990s, *S. flexneri* was the most commonly isolated serotype from patients with acute bacterial dysentery in the United Kingdom [13]. In the 1990s, *S. flexneri* was the most commonly isolated serotype from patients with acute bacterial dysentery in the United Kingdom [13].

In the 1990s, *S. flexneri* was the most commonly isolated serotype from patients with acute bacterial dysentery in the United Kingdom [13].
