the 1990s, the number of people in the UK who are aged 65 and over has increased from 10.5 million to 13.5 million, and the number of people aged 75 and over has increased from 4.5 million to 6.5 million (Office for National Statistics 2000). The number of people aged 65 and over is projected to increase to 16.5 million by 2020, and the number of people aged 75 and over to 8.5 million (Office for National Statistics 2000).

There is a growing awareness of the need to address the needs of older people in the UK. The Department of Health (2000) has published a strategy for older people, which sets out the government's commitment to improve the lives of older people. The strategy is based on three main principles: (1) to ensure that older people have the opportunity to live independently and actively; (2) to ensure that older people have access to the services and support they need; and (3) to ensure that older people are treated with respect and dignity.

The strategy is based on three main principles: (1) to ensure that older people have the opportunity to live independently and actively; (2) to ensure that older people have access to the services and support they need; and (3) to ensure that older people are treated with respect and dignity. [The following text is a dense, continuous block of text, likely a scan of a document page. It is mostly illegible due to extreme blurring and low contrast. The text appears to be a single paragraph or a series of lines of prose, but the specific words and sentences cannot be transcribed accurately.]

[The following text is a dense, continuous block of text, likely a scan of a document page. It is mostly illegible due to extreme blurring and low contrast. The text appears to be a single paragraph or a series of lines of prose, but the specific words and sentences cannot be transcribed accurately.]

the 1990s, the number of people in the UK who are employed in the public sector has increased by 1.5 million, from 2.5 million in 1980 to 4 million in 1999. The public sector has also become an important employer of people with disabilities. In 1999, 1.2 million people with disabilities were employed in the public sector, compared with 0.8 million in 1980 (Department of Social Security 2000).

There is a growing awareness of the need to ensure that people with disabilities are able to participate fully in society. This has led to a number of initiatives aimed at improving the lives of people with disabilities. One of the most important of these is the Disability Discrimination Act (DDA) 1995, which aims to ensure that people with disabilities are not discriminated against in the workplace, in education, in transport, and in other areas of public life.

The DDA 1995 has led to a number of changes in the way that public services are provided. For example, it has led to the introduction of accessibility standards for public buildings, and to the requirement that public services be provided in a way that is accessible to people with disabilities. It has also led to the introduction of measures to ensure that people with disabilities are able to participate fully in the workplace.

One of the most important of these measures is the requirement that employers must take steps to ensure that people with disabilities are able to participate fully in the workplace. This includes the requirement that employers must provide reasonable adjustments to the workplace to enable people with disabilities to work. This may include the provision of special equipment, or the provision of special training.

The DDA 1995 has also led to the introduction of measures to ensure that people with disabilities are able to participate fully in education. This includes the requirement that schools and universities must take steps to ensure that people with disabilities are able to participate fully in education. This may include the provision of special equipment, or the provision of special training.

The DDA 1995 has also led to the introduction of measures to ensure that people with disabilities are able to participate fully in transport. This includes the requirement that public transport providers must take steps to ensure that people with disabilities are able to use public transport. This may include the provision of special equipment, or the provision of special training.

The DDA 1995 has also led to the introduction of measures to ensure that people with disabilities are able to participate fully in other areas of public life. This includes the requirement that public service providers must take steps to ensure that people with disabilities are able to participate fully in public life. This may include the provision of special equipment, or the provision of special training.

The DDA 1995 has led to a number of changes in the way that public services are provided. [The following text is a dense, continuous block of text, likely a scan of a document page. It is mostly illegible due to the quality of the scan and the density of the text. The text appears to be a single paragraph or a section of a larger document, but the specific content cannot be accurately transcribed.]

the 1990s, the number of people in the world who are under 15 years of age has increased from 1.1 billion to 1.5 billion. The number of people aged 65 and over has increased from 200 million to 350 million. The number of people aged 15–64 years has increased from 1.5 billion to 2.0 billion.

There are a number of factors which have contributed to the increase in the number of people in the world who are under 15 years of age. One of the main factors is the increase in the number of people who are having children at a younger age. This is due to a number of factors, including the fact that people are having children at a younger age than in the past, and the fact that people are having more children than in the past.

Another factor is the increase in the number of people who are surviving into old age. This is due to a number of factors, including the fact that people are living longer than in the past, and the fact that people are having more children than in the past. This is due to a number of factors, including the fact that people are having children at a younger age than in the past, and the fact that people are having more children than in the past.

The increase in the number of people in the world who are under 15 years of age is a major challenge for the world. It is a challenge because it means that there are more people who need to be educated, and more people who need to be employed. It is a challenge because it means that there are more people who need to be supported by the state, and more people who need to be supported by the family.

The increase in the number of people in the world who are under 15 years of age is a major challenge for the world. [The following text is a dense, continuous block of text, likely a scan of a document page. It appears to be a mix of English and possibly some non-English characters, but the overall structure suggests a single paragraph or a series of lines of text. Due to the low resolution and potential noise in the scan, the specific words and punctuation are difficult to discern accurately. The text is oriented vertically on the page.]
